Moral Machines Wendell Wallach, Colin Allen, 2008-11-19 Computers are already approving financial transactions controlling electrical supplies and driving trains Soon service robots will be taking care of the elderly in their homes and military robots will have their own targeting and firing protocols Colin Allen and Wendell Wallach argue that as robots take on more and more responsibility they must be programmed with moral decision making abilities for our own safety Taking a fast paced tour through the latest thinking about philosophical ethics and artificial intelligence the authors argue that even if full moral agency for machines is a long way off it is already necessary to start building a kind of functional morality in which artificial moral agents have some basic ethical sensitivity But the standard ethical theories don't seem adequate and more socially engaged and engaging robots will be needed As the authors show the quest to build machines that are capable of telling right from wrong has begun **Moral Machines** is the first book to examine the challenge of building artificial moral agents probing deeply into the nature of human decision making and ethics

Ethics and Robotics Rafael Capurro, Michael

Nagenborg, 2009 Ethics and robotics are two academic disciplines one dealing with the moral norms and values underlying implicitly or explicitly human behavior and the other aiming at the production of artificial agents mostly as physical devices with some degree of autonomy based on rules and programmes set up by their creators Robotics is also one of the research fields where the convergence of nanotechnology biotechnology information technology and cognitive science is currently taking place with large societal and legal implications beyond traditional industrial applications Robots are and will remain in the foreseeable future dependent on human ethical scrutiny as well as on the moral and legal responsibility of humans Human robot interaction raises serious ethical questions right now that are theoretically less ambitious but practically more important than the possibility of the creation of moral machines that would be more than machines with an ethical code The ethical perspective addressed in this volume is therefore the one we humans have when interacting with robots Topics include the ethical challenges of healthcare and warfare applications of robotics as well as fundamental questions concerning the moral dimension of human robot interaction including epistemological ontological and psychoanalytic issues It deals also with the intercultural dialogue between Western and Non Western as well as between European and US American ethicists P 4 of cover
