Natures Clocks How Scientists Measure The Age Of Almost Everything:

Nature's Clocks Douglas Macdougall,2008-06-30 Radioactivity is like a clock that never needs adjusting writes Doug Macdougall It would be hard to design a more reliable timekeeper In *Nature's Clocks* Macdougall tells how scientists who were seeking to understand the past arrived at the ingenious techniques they now use to determine the age of objects and organisms By examining radiocarbon C 14 dating the best known of these methods and several other techniques that geologists use to decode the distant past Macdougall unwraps the last century's advances explaining how they reveal the age of our fossil ancestors such as Lucy the timing of the dinosaurs extinction and the precise ages of tiny mineral grains that date from the beginning of the earth's history In lively and accessible prose he describes how the science of geochronology has developed and flourished Relating these advances through the stories of the scientists themselves James Hutton William Smith Arthur Holmes Ernest Rutherford Willard Libby and Clair Patterson Macdougall shows how they used ingenuity and inspiration to construct one of modern science's most significant accomplishments a timescale for the earth's evolution and human prehistory

Nature's Clocks J. D. Macdougall,2008 A lucid and engaging account of the scientific revolution that changed the way we think about our planet and ourselves James Lawrence Powell author of *Grand Canyon* and *Mysteries of Terra Firma*

Why Geology Matters J. D. Macdougall,2011-05-02 Volcanic dust climate change tsunamis earthquakes geoscience explores phenomena that profoundly affect our lives But more than that as Doug Macdougall makes clear the science also provides important clues to the future of the planet In an entertaining and accessibly written narrative Macdougall gives an overview of Earth's astonishing history based on information extracted from rocks ice cores and other natural archives He explores such questions as What is the risk of an asteroid striking Earth Why does the temperature of the ocean millions of years ago matter today How are efforts to predict earthquakes progressing Macdougall also explains the legacy of greenhouse gases from Earth's past and shows how that legacy shapes our understanding of today's human caused climate change We find that geoscience in fact illuminates many of today's most pressing issues the availability of energy access to fresh water sustainable agriculture maintaining biodiversity and we discover how by applying new technologies and ideas we can use it to prepare for the future
