Navigating Social-ecological Systems Fikret Berkes, Johan Colding, Carl Folke, 2003 Drawing on complex systems theory this book investigates how human societies deal with change in linked social ecological systems and build capacity to adapt to change The concept of resilience is central in this context Resilient social ecological systems have the potential to sustain development in a manner that does not lead to loss of future options Resilient systems provide capacity for renewal and innovation in the face of rapid transformation and crisis Case studies and examples from several geographic areas cultures and resource types are included merging forefront research from natural sciences social sciences and the humanities into an innovative framework for sustainable systems

Navigating Social-Ecological Systems Fikret Berkes, Johan Colding, Carl Folke, 2008-04-24 In the effort towards sustainability it has become increasingly important to develop conceptual frames to understand the dynamics of social and ecological systems Drawing on complex systems theory this book investigates how human societies deal with change in linked social ecological systems and build capacity to adapt to change The concept of resilience is central in this context Resilient social ecological systems have the potential to sustain development by responding to and shaping change in a manner that does not lead to loss of future options Resilient systems also provide capacity for renewal and innovation in the face of rapid transformation and crisis The term navigating in the title is meant to capture this dynamic process Case studies and examples from several geographic areas cultures and resource types are included merging forefront research from natural sciences social sciences and the humanities into a common framework for new insights on sustainability

Principles of Ecosystem Stewardship F Stuart Chapin III, Gary P. Kofinas, Carl Folke, 2009-06-12 The world is undergoing unprecedented changes in many of the factors that determine its fundamental properties and their influence on society These changes include climate the chemical composition of the atmosphere the demands of a growing human population for food and shelter and the mobility of organisms and natural products cultural perspectives and information flows The magnitude and widespread nature of these changes pose serious challenges in managing the ecosystem services on which society depends Moreover many of these changes are strongly influenced by human activities so future patterns of change will continue to be influenced by society's choices and governance The purpose of this book is to provide a new framework for natural resource management a framework based on stewardship of ecosystems for human well being in a world dominated by uncertainty and change The goal of ecosystem stewardship is to respond to and shape change in social ecological systems in order to sustain the supply and opportunities for use of ecosystem services by society The book links recent advances in the theory of resilience sustainability and vulnerability with practical issues of ecosystem management and governance The book is aimed at advanced undergraduates and beginning graduate students of natural resource management as well as professional managers community leaders and policy makers with backgrounds in a wide array of disciplines including ecology policy studies economics sociology and anthropology

Adaptive Co-Management

Derek Armitage, Fikret Berkes, Nancy Doubleday, 2010-10-01 In Canada and around the world governments are shifting away from regulatory models for governing natural and cultural resources. New concerns with adaptive processes, feedback learning and flexible partnerships are reshaping environmental governance. Meanwhile ideas about collaboration and learning are converging around the idea of adaptive co management. This book provides a comprehensive synthesis of the core concepts, strategies and tools in this emerging field, informed by a diverse group of researchers and practitioners with over two decades of experience. It also offers a diverse set of case studies that reveal the challenges and implications of adaptive co management thinking and synthesizes lessons for natural and cultural resource governance in a wide range of contexts. Adaptive Co Management is not only a timely book but also a useful concept for resource governance in a world marked by rapid socio ecological change. It will be of interest to researchers, environmental practitioners, policy makers and students in fields across the political and environmental spectrum. **Coastal Environments in the West of Ireland** John

B. Roney, Mark Beekey, 2022-11-16 This multi authored study explores how the natural sciences and the humanities together can understand the connections between the natural environment, the built environment and the cultural heritage of communities along the west coast of Ireland. Knowledge of the sea and marine life and what they mean to humanity is dependent on both scientific study and local knowledge which in turn can lead to a greater commitment to sustainability. Until the 1950s there was little government support for scientific research nor an interest in helping fisheries beyond near shore catch. Irish fisheries remained small, underfunded and had difficulty accessing international markets. However as this book shows Ireland's cultural heritage demonstrates a deep appreciation for the coastal environment and a sense of place. This is preserved in the Irish language in poetry, story and music and in the ways the Irish lived with an often wild coastal topography. *Integrated Analysis of Human-environment Systems* Stanley Tanyi Asah, 2006 *Climate Change and*

Adaptive Innovation Sunil D. Santha, 2020-03-27 The world is witnessing climate change. As responsible citizens of planet earth we can actively participate in the co creation of actionable knowledge and solutions. There may not be a single and linear pathway to adaptation anymore. This book explores multiple and iterative pathways of adapting to climate change and its impacts. Climate Change and Adaptive Innovation introduces an adaptive innovation model that has its premise on core values of justice, care and solidarity. Navigating collectively through shared conversations and dialogic processes, this model showcases how we could embark on an enduring journey where diverse actors could collaboratively make informed choices and take necessary actions to enhance the safety and security of their lived environment. Rooted in action research, it is envisaged that this model could enable us to facilitate the designing and implementation of people centred ethical adaptation projects. This book will be of interest to social workers, social scientists and development practitioners who are engaged in the field of climate justice, adaptation, social innovation and sustainable livelihoods. Social work educators and students will certainly draw inspiration from the stories that are shared in this book. It will further motivate many transdisciplinary

professionals to engage with action research as a method of innovation reflection and practice

The SAGE Handbook of Environment and Society Jules Pretty, Andy Ball, Ted Benton, Julia Guivant, David R Lee, David Orr, Max Pfeffer, Professor Hugh Ward, 2007-10-30 A monumental and timely contribution to scholarship on society and environments The handbook makes it easy and compelling for anyone to learn about that scholarship in its full manifestations and as represented by some of the most highly respected researchers and thinkers in the English speaking world It is wide reaching in scope and far reaching in its implications for public and private action a definite must for serious researchers and their libraries Bonnie J McCay Rutgers University This is the desert island book for anyone interested in the relationship between society and the environment The editors have assembled a masterful collection of contributions on every conceivable dimension of environmental thinking in the social sciences and humanities No library should be without it Robyn Eckersley University of Melbourne The SAGE Handbook of Environment and Society focuses on the interactions between people societies and economies and the state of nature and the environment Editorially integrated but written from multi disciplinary perspectives it is organised in seven sections Environmental thought past and present Valuing the environment Knowledges and knowing Political economy of environmental change Environmental technologies Redesigning natures Institutions and policies for influencing the environment Key themes include locations where the environment society relation is most acute where for example there are few natural resources or where industrialization is unregulated the discussion of these issues at different scales local regional national and global the cost of damage to resources and the relation between principal actors in the environment society nexus Aimed at an international audience of academics research students researchers practitioners and policy makers The SAGE Handbook of Environment and Society presents readers in social science and natural science with a manual of the past present and future of environment society links

Complexity Theory for a Sustainable Future Jon Norberg, Graeme S. Cumming, 2008 Complexity theory illuminates the many interactions between natural and social systems providing a better understanding of the general principles that can help solve some of today s most pressing environmental issues Complexity theory was developed from key ideas in economics physics biology and the social sciences and contributes to important new concepts for approaching issues of environmental sustainability such as resilience scaling and networks Complexity Theory for a Sustainable Future is a hands on treatment of this exciting new body of work and its applications bridging the gap between theoretical and applied perspectives in the management of complex adaptive systems Focusing primarily on natural resource management and community based conservation the book features contributions by leading scholars in the field many of whom are among the leaders of the Resilience Alliance Theoreticians will find a valuable synthesis of new ideas on resilience sustainability asymmetries information processing scaling and networks Managers and policymakers will benefit from the application of these ideas to practical approaches and empirical studies linked to social ecological systems Chapters present new twists on such existing approaches as scenario planning scaling analyses and

adaptive management and the book concludes with recommendations on how to manage natural resources how to involve stakeholders in the dynamics of a system and how to explain the difficult topic of scale A vital reference for an emerging discipline this volume provides a clearer understanding of the conditions required for systems self organization since the capacity of any system to self organize is crucial for its sustainability over time Green Utopianism Karin Bradley, Johan Hedrén, 2014-03-21 Utopian thought and experimental approaches to societal organization have been rare in the last decades of planning and politics Instead there is a widespread belief in ecological modernization that sustainable societies can be created within the frame of the current global capitalist world order by taking small steps such as eco labeling urban densification and recycling However in the context of the current crisis in which resource depletion climate change uneven development and economic instability are seen as interlinked this belief is increasingly being questioned and alternative developmental paths sought This collection demonstrates how utopian thought can be used in a contemporary context as critique and in exploring desired futures The book includes theoretical perspectives on changing global socio environmental relationships and political struggles for alternative development paths and analyzes micro level practices in co housing alternative energy provision use of green space transportation co production of urban space peer to peer production and consumption and alternative economies It contributes research perspectives on contemporary green utopian practices and strategies combining theoretical and empirical analyses to spark discussions of possible futures Journal of Ecological Anthropology, 2013 *Systems Thinking and Complexity Science* Kurt Anders Richardson, Kurt Antony Richardson, Wendy J. Gregory, Gerald Midgley, 2006 Ecosystems and Human Well-Being Millennium Ecosystem Assessment (Program). Sub-global Assessments Working Group, 2005-12-14 One of the major innovations of the Millennium Ecosystem Assessment is the incorporation of local and regional assessments 33 in all in a global portrait of the planet s health It is the first global assessment of ecosystems to include not only a diversity of ecosystems but to draw on a wide range of cultural orientations and intellectual traditions including those of indigenous peoples The Sub global Assessments Working Group integrated information from multiple sources and found that biophysical factors such as land use change climate change and variability pollution and invasive species have a significant effect on human well being across cultures For example in places where there are no other social safety nets diminished human well being tends to increase immediate dependence on ecosystem services which can damage the capacity of those local ecosystems which in turn appears to increase the probability of natural disaster or conflict Representing the baseline and framework for ongoing assessments of ecosystem and human well being on a variety of scales around the world Multiscale Assessments provides students researchers and policy makers with the most comprehensive methodology for assessing ecosystems at local national and regional scales *Sustainable Agriculture and Food* Jules N. Symposium ,2008 *Annual Review of Communications* ,2005 **Climate Vulnerability** ,2013-03-15 Climate change has been the subject of thousands of books and magazines scientific journals and newspaper articles daily It s a subject that

can be very political and emotional often blurring the lines between fact and fiction The vast majority of research studies projections and recommendations tend to focus on the human influence on climate change and global warming as the result of CO2 emissions often to the exclusion of other threats that include population growth and the stress placed on energy sources due to emerging global affluence Climate Vulnerability Five Volume Set seeks to strip away the politics and emotion that surround climate change and will assess the broad range of threats using the bottom up approach including CO2 emissions population growth emerging affluence and many others to our five most critical resources water food ecosystems energy and human health Inclusively determining what these threats are while seeking preventive measures and adaptations is at the heart of this unique reference work Takes a Bottom Up approach addressing climate change and the threat to our key resources at the local level first and globally second providing a more accurate and inclusive approach Includes extensive cross referencing which is key to readers as new connections between factors can be discovered Cuts across a number of disciplines and will appeal to Biological Science Earth Environmental Science Ecology and Social Science comprehensively addressing climate change and other threats to our key resources from multiple perspectives Remote Control Godfrey Baldacchino, Robert Marshall Greenwood, 2009 How does one transform small size and relative isolation into a powerful combination for sustainable growth and prosperity Some islands and rural regions have already done so Winning tools and strategies deployed by these middle level governance structures include scaling up of municipal units developing tourist and computer driven industries engaging strategically with their diaspora branding niche products and services facilitating boutique small scale manufacturing limiting local firm rivalry and overall deploying a creative resourcefulness of jurisdiction The papers in this collection flesh out these tools and strategies They do so by unpacking and challenging received wisdom charting out the parameters of effective government teasing in the critical role of empowered local communities and the engagement of civil society with the multiple levels of decision making of the state The book s message emphasizes a proactive creative and assertive approach to governance one that aims to instill a sense of efficacy to achieve remote control
