*Scholarship in Action: Essays on the Life and Work of Christiaan Snouck Hurgronje (1857-1936)* ,2023-02-06 The Dutch scholar Christiaan Snouck Hurgronje 1857 1936 was one of the most famous orientalists of his time He acquired early fame through his daring research in Mecca in 1884 85 masterly narrated in two books and accompanied by two portfolios of photographs As an adviser to the colonial government in the Dutch East Indies from 1889 until 1906 he was on horseback during campaigns of pacification and published extensively on Indonesian cultures and languages Meanwhile he successively married two Sundanese women with whom he had several children In 1906 he became a professor in Leiden and promoted together with colleagues abroad the study of modern Islam meant to be useful for colonial purposes Despite his considerable scholarly political and cultural influence in the first decades of the twentieth century nowadays Snouck Hurgronje has been almost forgotten outside a small circle of specialists since he mainly published in Dutch and German The contributors to this volume each offer new insights about this enigmatic scholar and political actor who might be considered a classic proponent of orientalism Their detailed studies of his life and work challenge us to reconsider common views of the history of the study of Islam in European academia and encourage a more nuanced post orientalist approach with ample attention for

**Java 2 Platform** Calvin Austin,Monica Pawlan,2000 Choice Outstanding Academic Title 2008 The uniqueness of shape as a perceptual property lies in the fact that it is both complex and structured Shapes are perceived veridically perceived as they really are in the physical world regardless of the orientation from which they are viewed The constancy of the shape percept is the sine qua nonof shape perception you are not actually studying shape if constancy cannot be achieved with the stimulus you are using Shape is the only perceptual attribute of an object that allows unambiguous identification In this first book devoted exclusively to the perception of shape by humans and machines Zygmunt Pizlo describes how we perceive shapes and how to design machines that can see shapes as we do He reviews the long history of the subject allowing the reader to understand why it has taken so long to understand shape perception and offers a new theory of shape Until recently shape was treated in combination with such other perceptual properties as depth motion speed and color This resulted in

apparently contradictory findings which made a coherent theoretical treatment of shape impossible Pizlo argues that once shape is understood to be unique among visual attributes and the perceptual mechanisms underlying shape are seen to be different from other perceptual mechanisms the research on shape becomes coherent and experimental findings no longer seem to contradict each other A single theory of shape perception is thus possible and Pizlo offers a theoretical treatment that explains how a three dimensional shape percept is produced from a two dimensional retinal image assuming only that the image has been organized into two dimensional shapes Pizlo focuses on discussion of the main concepts telling the story of shape without interruption Appendixes provide the basic mathematical and computational information necessary for a technical understanding of the argument References point the way to more in depth reading in geometry and computational vision
