Co-Branding Strategies for Smart Luxury Products Tarnanidis, Theodore, Sousa, Bruno, Vlachopoulou, Maro, Papachristou, Evridiki, Kittu Manda, Vijaya, 2025-07-29 Co branding is a marketing strategy that brings together two brands to harness their strengths and create a product with greater value. The importance of innovation, exclusivity, and brand reputation is especially significant in industries like luxury smart consumer products. In multicultural markets, it refers to a strategic alliance between a luxury brand and a technology brand designed to appeal to a range of cultural preferences, values, and consumption patterns. Companies can now deliver innovative products while maintaining exclusivity thanks to the fusion of luxury and technology in their branding strategies. By using this approach, the product can resonate with global audiences while still maintaining the exclusivity and prestige associated with luxury. *Co Branding Strategies for Smart Luxury Products* examines the use of co branding strategies, the advancement of smart consumer products, and the convergence of luxury branding and technology in marketing. It discusses how co branding can be used in marketing to personalize content, enhance targeting, and optimize campaigns. Covering topics such as consumer loyalty, sustainable business initiatives, and internet freedom, this book is an excellent resource for consultants, business owners, marketing practitioners, policymakers, researchers, academicians, and more.

Physio-logging in Humans: Recent Advances and Limitations in Wearable Devices for Biomedical Applications

Applications Mohammad Yavarimanesh, Colin K. Drummond, Cederick Landry, 2025-08-29 The recent advancements in wearables, nearables, and machine learning have paved the way for unparalleled approaches to monitoring physiological parameters. These approaches show great potential in studying human physiology during daily life as well as in extreme conditions such as astronaut monitoring and human performance. In addition, wearables and recent advances in physio logging can alleviate the impact of numerous diseases and medical conditions globally and therefore have the potential to reduce the cost of healthcare and increase patients' quality of life. Noteworthy strides have already been accomplished, evoking enthusiasm among patients and researchers alike, but very few wearable solutions have reached their anticipated potential due to many limitations such as sensor interoperability, fit, comfort, adverse reaction to wearables, lack of design standards, and validation guidelines. By curating an article collection that brings together explored avenues to monitor physiological parameters that did or did not work, it is anticipated that further progress in the field can be accelerated.
