**28-531 Scaffolding 2**, 1991    *A Guide to Scaffold Use in the Construction Industry* U.S. Department of Labor, Occupational Safety and Health Administration, 2014-03-08. The Occupational Safety and Health Act of 1970 charges the Occupational Safety and Health Administration (OSHA) with protecting all working men and women across the United States. To do so, the agency sets federal standards for general industry, construction and shipyard employment. OSHA also promotes a variety of voluntary programs that strive to form partnerships with businesses, labor and other groups to help employers provide safer and more healthful workplaces for employees. Some of the agency's voluntary initiatives include safety and health management programs, the Voluntary Protection Programs, consultation assistance and training and education programs and grants. The agency's recent rule, Safety Standards for Scaffolds Use in the Construction Industry, aims to protect workers using scaffolding in construction work. Scaffolding hazards continue to rank high on the list of the most frequently cited standards in the construction industry. Scaffold related fatalities account for a significant number of fatalities in the construction workplace. This booklet addresses some of the most common questions about OSHA's scaffold standard. It is all part of the agency's effort to provide guidance to employers who need help in complying with OSHA's standards to protect the working men and women across the nation.

*A Guide to Scaffold Use in the Construction Industry*, 2001. On August 30, 1996, OSHA issued revised standards for scaffolds. The revised standard, known as Safety Standards for Scaffolds Used in the Construction Industry, is found in Title 29 Code of Federal Regulations (CFR) Part Subpart L. The final rule updates the existing construction scaffold standards in Subpart L. The revised standards set performance based criteria to protect employees from scaffold related hazards such as falls, falling objects, structural instability, electrocution or overloading. This final rule addresses training and various types of scaffolds as well as falling object protection, ladders, weather conditions, aerial lifts, stilts and other matters that were not previously covered by the OSHA scaffold standards. In addition, it allows employers more flexibility when using protective systems for workers on scaffolding. The language of the rule has been simplified by eliminating duplicative and outdated provisions, consolidating overlapping requirements and enhancing performance based criteria to allow employers more flexibility in compliance while still protecting employees.
