Milieubalans Van Nederland:

Air Pollution Abstracts, 1975 **Nederlands bosbouw tijdschrift**, 1973 *Ammonia: the case of the Netherlands* Dick A.J. Starmans, Klaas W. van der Hoek, 2023-08-28 In The Netherlands an intense growth in animal husbandry has taken place during the past decades This growth induced major shifts in the national nitrogen and ammonia balance with feedstuff being imported from abroad and animal waste being used in excess in Dutch agricultural areas Growing environmental responsibility which was triggered by scientific observations on field scale early on resulted in putting animal waste and ammonia on the political agenda Governmental regulations were put in effect and research programs were set up to develop techniques to measure and reduce ammonia emissions based on a scientific approach Meanwhile an inventory was made of the size of the animal waste problem Additionally the impacts on the environment were studied as well as technical solutions to minimize the animal waste production were developed This book aims to provide a full overview of all ammonia emission related aspects of animal husbandry in the Netherlands Besides the background information as described above it includes a technical and practical inventory of emission sources from cattle pig and poultry housings followed by a listing of government approved housing systems and manure application techniques that have been measured according to standard protocols to quantify the on farm decrease of ammonia emissions For both traditional and low emission systems a list of emission factors is included By presenting common practices in the Netherlands this book also informs other EU countries about our ongoing insights regarding Dutch regulations measurement protocols abatement techniques and interpretation of measured farm scale data to national emission values In this way it will contribute to directing the development of livestock production throughout the EU member states towards a healthy and more sustainable future Landscape Ecology in the Dutch Context T.M. de Jong, J.N.M. Dekker, R. Posthoorn, 2017-04-03 This book is the result of three symposia of the Dutch Society for Landscape Ecology Werkgemeenschap voor Landschapsecologisch Onderzoek about the Dutch National Ecological Network urban ecology and civil infrastructure The three topics among others show important contexts in which landscape ecologists do their research and apply their knowledge and skills The book focuses on urbanisation intensive land use and water management as characteristic features of the Netherlands and therefore presents an important view on landscape ecology in the Dutch context **De Nederlandse economie**, 2012 **Third-Party Risk Policies in the Netherlands** Ben J.M. Ale, 2023-04-04 It is not easy to keep the population safe in a country that is one of the most densely populated in the world is a hub of international transport over land and water as well as through the air and about one third of which lies under sea level Third party risk policies developed gradually in the Netherlands but became acute in the latter part of the 20th century with the growth of various industries use and production of hazardous materials The Dutch government considering its constitutional responsibility to protect the life health and wellbeing of its people must resolve the ongoing debate between the general population who are exposed to these risks and those profiting from the creation of said risks the

resultant policies are a product of this balancing act This book will be of interest to politicians policymakers civil servants and the general population as it contains valuable insight into what constitutes sustainable policy and how it can be achieved
