## **Mind Brain And Narrative:**

**Mind, Brain and Narrative** Anthony J. Sanford,Catherine Emmott,2012-12-20 Narratives enable readers to vividly experience fictional and non fictional contexts Writers use a variety of language features to control these experiences they direct readers in how to construct contexts how to draw inferences and how to identify the key parts of a story Writers can skilfully convey physical sensations prompt emotional states effect moral responses and even alter the readers attitudes Mind Brain and Narrative examines the psychological and neuroscientific evidence for the mechanisms which underlie narrative comprehension The authors explore the scientific developments which demonstrate the importance of attention counterfactuals depth of processing perspective and embodiment in these processes In so doing this timely interdisciplinary work provides an integrated account of the research which links psychological mechanisms of language comprehension to humanities work on narrative and style     *Mind, Brain and Narrative* Anthony J. Sanford,Catherine Emmott,2012-12-20 An examination of the scientific evidence for the mechanisms which underlie the effect a writer s language has on the reader

**Brain, Mind, and the Narrative Imagination** Christopher Comer,Ashley Taggart,2021-02-25 Stories can inspire love anger fear and nostalgia but what is going on in our brains when this happens And how do our minds conjure up worlds and characters from the words we read on the page Rapid advances in the scientific understanding of the brain have cast new light on how we engage with literature This book collaboratively written by an experienced neuroscientist and literary critic and writer explores these new insights Key concepts in neuroscience are first introduced for non specialists and a range of literary texts by writers such as Ian McEwan Jim Crace and E L Doctorow are read in light of the latest scientific thought on the workings of the mind and brain Brain Mind and the Narrative Imagination demonstrates how literature taps into deep structures of memory and emotion that lie at the heart of our humanity It will be of interest to readers of all sorts and students from both the humanities and the sciences     *Stories and the Brain* Paul B. Armstrong,2020-05-26 This book explains how the brain interacts with the social world and why stories matter How do our brains enable us to tell and follow stories And how do stories affect our minds In Stories and the Brain Paul B Armstrong analyzes the cognitive processes involved in constructing and exchanging stories exploring their role in the neurobiology of mental functioning Armstrong argues that the ways in which stories order events in time imitate actions and relate our experiences to others lives are correlated to cortical processes of temporal binding the circuit between action and perception and the mirroring operations underlying embodied intersubjectivity He reveals how recent neuroscientific findings about how the brain works how it assembles neuronal syntheses without a central controller illuminate cognitive processes involving time action and self other relations that are central to narrative An extension of his previous book How Literature Plays with the Brain this new study applies Armstrong s analysis of the cognitive value of aesthetic harmony and dissonance to narrative Armstrong explains how narratives help the brain negotiate the neverending conflict between its need for pattern synthesis and constancy and its

need for flexibility adaptability and openness to change The neuroscience of these interactions is part of the reason stories give shape to our lives even as our lives give rise to stories Taking up the age old question of what our ability to tell stories reveals about language and the mind this truly interdisciplinary project should be of interest to humanists and cognitive scientists alike

**A New Theory of Mind** James A. Wise,2016-05-11 This book presents a unique and intuitively compelling way of understanding how humans think It argues that narratives are the natural mode of thinking that the urge to think narratively reflects known neurological processes and that although narrative thinking is a product of evolution it enables us to transcend our evolutionary limits and actively shape our own futures In remarkably engaging language the authors describe how the currency of neural activity in the brain is transformed into the qualitatively different currency of conscious experience the everyday purposeful story like experience with which we all are familiar The book then examines the nature of thought and how it leads to purposeful action discussing among other concerns how memories about the past perceptions about the present and expectations about the future are structured as plausible coherent narratives by causation purpose and time and how errors are introduced into one's narratives both naturally and by other people often intentionally and how those errors bias one's expectations about the future and the actions taken or not taken as a consequence Each of these discussions is followed by a commentary that ties them to interesting facts and questions from throughout the physical and social sciences The book is concluded with the argument that narrative thought is what is meant when one uses the word mind

**A Cognitive Approach to Ernest Hemingway's Short Fiction** Gabriela Tucan,2021-04-09 How do readers make sense of Hemingway's short stories How is it possible that the camera like quality of his narrative can appeal to our senses and arouse our emotions How does it capture us With reserved narrators and protagonists engaged in laconic dialogs his texts do not seem to say much This book consciously revisits our responses to the Hemingway story a belated response to his invitation to discover what lies beneath the surface of his iceberg What this pioneering critical endeavor seeks to understand is the thinking required in reading Hemingway's short fiction It proposes a cognitively informed model of reading which questions the resources of the reader's imaginative powers The cognitive demonstrations here are designed to have potentially larger implications for the short story's general mode of knowing Drawing from both cognitively oriented poetics and narratology in equal measure this book explains what structures our interaction with literary texts

*Routledge Encyclopedia of Narrative Theory* David Herman,Manfred Jahn,Marie-Laure Ryan,2010-06-10 The past several decades have seen an explosion of interest in narrative with this multifaceted object of inquiry becoming a central concern in a wide range of disciplinary fields and research contexts As accounts of what happened to particular people in particular circumstances and with specific consequences stories have come to be viewed as a basic human strategy for coming to terms with time process and change However the very predominance of narrative as a focus of interest across multiple disciplines makes it imperative for scholars teachers and students to have access to a comprehensive reference resource

### **Development of executive function during childhood** Yusuke Moriguchi, Philip D Zelazo, Nicolas

Chevalier, 2016-04-01 Executive function refers to the goal oriented regulation of one's own thoughts, actions, and emotions. Its importance is attested by its contribution to the development of other cognitive skills e.g. theory of mind, social abilities e.g. peer interactions, and academic achievement e.g. mathematics, and by the consequences of deficits in executive function which are observed in a wide range of developmental disorders such as attention deficit hyperactivity disorder and autism. Over the last decade, there has been growing interest in the development of executive function, and an expanding body of research has shown that executive function develops rapidly during the preschool years, with adult level performance being achieved during adolescence or later. This recent work, together with experimental research showing the effects of interventions targeting executive function, has yielded important insights into the neurocognitive processes underlying executive function. Given the complexity of the construct of executive function, however, and the multiplicity of underlying processes, there are often inconsistencies in the way that executive function is defined and studied. This inconsistency has hampered communication among researchers from various fields. This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function. Researchers using various methods, including behavioral experiments, neuroimaging, eye tracking,

computer simulation observational methods and questionnaires are encouraged to contribute original empirical research In addition to original empirical articles theoretical reviews and opinions perspective articles on promising future directions are welcome We hope that researchers from different areas such as developmental psychology educational psychology experimental psychology neuropsychology neuroscience psychiatry computational science etc will be represented in the Research Topic *Storytelling and the Sciences of Mind* David Herman,2017-02-24 An transdisciplinary exploration of narrative not just as a target for interpretation but also as a means for making sense of experience itself With Storytelling and the Sciences of Mind David Herman proposes a cross fertilization between the study of narrative and research on intelligent behavior This cross fertilization goes beyond the simple importing of ideas from the sciences of mind into scholarship on narrative and instead aims for convergence between work in narrative studies and research in the cognitive sciences The book as a whole centers on two questions How do people make sense of stories And How do people use stories to make sense of the world Examining narratives from different periods and across multiple media and genres Herman shows how traditions of narrative research can help shape ways of formulating and addressing questions about intelligent activity and vice versa Using case studies that range from Robert Louis Stevenson's Dr Jekyll and Mr Hyde to sequences from The Incredible Hulk comics to narratives told in everyday interaction Herman considers storytelling both as a target for interpretation and as a resource for making sense of experience itself In doing so he puts ideas from narrative scholarship into dialogue with such fields as psycholinguistics philosophy of mind and cognitive social and ecological psychology After exploring ways in which interpreters of stories can use textual cues to build narrative worlds or storyworlds Herman investigates how this process of narrative worldmaking in turn supports efforts to understand and engage with the conduct of persons among other aspects of lived experience

[Alterity and Empathy in Post-1945 Asian American Narratives](#) Hyesu Park,2021-11-29 This book examines how Asian American authors since 1945 have deployed the stereotype of Asian American inscrutability in order to re-examine and debunk the stereotype in various ways By paying special attention to what narrative theorists have regarded as one of the most extraordinary aspects of fiction its ability to give or else deny readers a remarkably detailed knowledge of the inner lives of their characters this book explores deeply and systematically the specific ways Asian American narratives attribute inscrutable minds to Asian American characters situating them at various points along a spectrum stretching between alterity and empathy Ultimately the book reveals the link between narrative form and larger cultural issues associated with the representation of Asian American minds and how a nuanced investigation of narrative form can yield insights into the sociocultural embeddedness of Asian American literature under the case studies insights that would not be available if such formal questions were bypassed

Kaplan,1998 Character and Identity Philosophical Foundations of Political and Sociological Perspectives is designed by editor Morton A Kaplan to show despite the fundamental flaws in the classical Greek accounts of truth and knowledge why its quest for rational knowledge remains legitimate and vital to the concepts of character and identity To set the stage Part One includes a statement of the classical Greek position by Dean Jude Dougherty an account of the contemporary anticlassical stories position by John Simpson and an initial attempt to restore the Greek concept of rational inquiry by Lloyd Eby In subsequent chapters Kaplan restates the Greek position and shows why developments in science and philosophy are incompatible with the Greek concepts of truth and knowledge A brief excursis through the history of philosophy is intended to show how the Greek quest can be pursued in a manner consonant with the contemporary realm of knowledge In the course of this argument it will be shown why Leo Strauss who regarded contemporary philosophy as the prisoner of a mistaken seventeenth century paradigm fatally misconceived the role of seventeenth century philosophy and its relationship to contemporary thought Kaplan argues that contemporary philosophy is in large part a response to the breakdown of Hegel a great attempt to provide a modern alternative to Aristotle's synoptic philosophy an attempt that brings history and historicity into the center of the picture Kaplan shows why postmodernism is based on an incomplete and ultimately incoherent understanding of the consequences of the collapse of the Hegelian system and of the character of language In a version of pragmatism that restores the concept of objective truth Kaplan then explores the political and sociological aspects of this philosophical position and shows how it relates to character and identity He then shows how a weakly ordered but relevant position with respect to ethics and morals is consistent with a sustainable contemporary understanding of the quest for rational objective knowledge      *The Story of the Living Machine* Herbert William Conn,1899
