legal mechanisms that govern domestic and international administrative interaction in the global field of aviation safety is explored. This book demonstrates that a legal system is never complete but always develops in tandem with changing needs i.e. the participation of the affected parties. Exploring the principles of GAL theory contributes to addressing the contemporary legal issues relating to state compliance with international aviation safety standards that would otherwise not be covered by customary international law. In particular the principles of GAL theory regarding global governance and the public character of global regulations, the role of individuals and states in global governance and state sovereignty are considered valuable contributions to contemporary global aviation safety issues in practice. It is asserted in this book that proper checks and balances in global aviation safety can be improved by making these accessible to individuals by way of national courts. Finally establishing public awareness of global aviation safety standards will eventually create greater pressure on states to implement and enforce them. This book is in an area increasing academic and research interest of practitioners of public international aviation law, global administrative law, global governance and global aviation safety, global air transport market regulations.
