Schore, 2015-11-19 For over three decades Allan N Schore has authored numerous volumes chapters and articles on regulation theory a biopsychosocial model of the development psychopathogenesis and treatment of the implicit subjective self The theory is grounded in the integration of psychology psychiatry and neuroscience and it is now being used by both clinicians to update psychotherapeutic models and by researchers to generate research First published in 1994 this pioneering volume represented the inaugural expression of his interdisciplinary model and has since been hailed by a number of scientific and clinical disciplines as a groundbreaking and paradigm shifting work This volume appeared at a time when the problem of emotion ignored for most of the last century was finally beginning to be addressed by science including the emergent field of affective neuroscience After a century of the dominance of the verbal left brain it presented a detailed characterization of the

early developing right brain and its unique social emotional and survival functions not only in infancy but across all later stages of the human life span. It also offered a scientifically testable and clinically relevant model of the development of the human unconscious mind. Affect Regulation and the Origin of the Self acts as a keystone and foundation for all of Schore's later writings as every subsequent book, article, and chapter that followed represented expansions of this seminal work.

Dog Bites: A Multidisciplinary Perspective Daniel Mills, Carri Westgarth, 2017-07-21. The issue of dog bites and dog aggression directed at humans is frequently in the media. However, scientific research and evidence on the subject is scattered and sparse. Public and political opinions are often misinformed and out of proportion to the extent of the problem. Experts who have researched into the many facets involved in the subject have not so far pooled their knowledge together. Dog Bites aims to bring together expert knowledge of the current situation from a wide variety of disciplines to provide information to the many people and professions affected by the issue. Subjects range from the practical medical, behavioural, sociological and theoretical, but the overall approach of the book is to be objective and integrative. Topics addressed include the genetic basis of aggression, the public image of aggressive dogs, bite statistics, risk factors, the forensics and surgical aspects of dog bites, international legal perspectives, court evidence, first aid treatment, zoonotic disease, potential behavioural rehabilitation options, risk to children, and a consideration of why some dogs kill. All contributors are academic or long-standing professional experts in their field and represent a wide spread of international expertise. The issue is an important one for pet owners, vets, animal shelters, and anyone who works with dogs such as the police. This book is a valuable resource for them as well as for animal behaviourists, academic researchers, health professionals, dog breeders, and handlers. Please be advised that this book contains strong images of the subject matter that some readers may find distressing. 5m Books.

Pocket Guide to Interpersonal Neurobiology Daniel J. Siegel, 2012-04-02. The central concepts of the theory of interpersonal neurobiology. Many fields have explored the nature of mental life, from psychology to psychiatry, literature to linguistics. Yet no common framework where each of these important perspectives can be honored and integrated with one another has been created in which a person seeking their collective wisdom can find answers to some basic questions such as: What is the purpose of life? Why are we here? How do we know things? How are we conscious of ourselves? What is the mind? What makes a mind healthy or unwell? And perhaps most importantly, What is the connection among the mind, the brain, and our relationships with one another? Our mental lives are profoundly relational. The interactions we have with one another shape our mental world. Yet as any neuroscientist will tell you, the mind is shaped by the firing patterns in the brain. And so how can we reconcile this tension that the mind is both embodied and relational? Interpersonal Neurobiology is a way of thinking across this apparent conceptual divide. This Pocket Guide to Interpersonal Neurobiology is designed to aid in your personal and professional application of the interpersonal neurobiology approach to developing a healthy mind, an integrated brain, and empathic relationships. It is also designed to assist you in seeing the intricate foundations of interpersonal

Key concepts in neuroscience presented for the non medical reader A fresh take on contemporary brain science this book presents neuroscience the scientific study of brain mind and behavior in easy to understand ways with a focus on concepts of interest to all science readers Rigorous and detailed enough to use as a textbook in a university or community college class it is at the same time meant for any and all readers clinicians and non clinicians alike interested in learning about the foundations of contemporary brain science From molecules and cells to mind and consciousness the known and the mysterious are presented in the context of the history of modern biology and with an eye toward better appreciating the beauty and growing public presence of brain science

Transference and Countertransference from an Attachment Perspective Una

McCluskey,Michael O'Toole,2019-08-29 Locating the phenomenon of transference within an evolutionary perspective this important book develops a new form of dynamic therapy that focuses on the dynamics of attachment in adult life and will be of use to a range of mental health professionals and those at all levels in the caring and education professions Transference and Countertransference from an Attachment Perspective A Guide for Professional Caregivers explores the ways in which transference phenomena can be located in the different aspects of the self that are instinctive goal corrected and interrelated At the centre of the book is the idea that when intrapersonal or interpersonal systems aspects of the self such as careseeking caregiving sharing interests sexuality self defence building a home get aroused the behaviour that follows is only logically and meaningfully connected when the system aspect of the self reaches its goal Placing this new theoretical and clinical approach within the psychoanalytic tradition the work of developmental psychologists and the field of neuroscience the book takes us to the heart of the clinical encounter and explores a range of issues including trauma the effect of early misattunements love and hate in the therapeutic relationship burnout in caregivers and the need for exploratory care for caregivers themselves Building on the therapeutic modality that emerged from the research described in McCluskey s To Be Met as a Person 2005 this book provides a valuable guide for psychologists psychotherapists medical practitioners nurses social workers organisational consultants educators coaches and workplace managers The McCluskey model for exploring

the dynamics of attachment in adult life which underlies the work described in this book is currently being practised in a variety of settings and with different ages and communities. These include end of life care organizations, homelessness, mental health, dementia care, children, adolescents and families, schools, pastoral work, training of clinical psychologists and attachment based psychoanalytic psychotherapists, occupational therapy, art therapy, private practice, domestic violence, police training, GP support and consultation, nurse training and support, pain management clinics, foster carers, social workers, couple relationships, supervision of psychotherapists and counsellors, therapeutic communities and complex grief and learning disabilities.

Psychiatric Advanced Practice Nursing Eris F Perese, 2012-01-05. Here's an evidence based, holistic approach to caring for psychiatric and mental health patients in outpatient settings. Using a biopsychosocial model, this text addresses mental health issues through stabilization of brain chemistry, individualized psychotherapy and re-socialization into the community. Inside, you'll find an in-depth focus on specific psychiatric disorders, including the epidemiology, etiology, biological basis, clinical presentation of adults, older adults, and children, co-morbidities, differential diagnosis, and treatment. There is also comprehensive coverage of the interventions and Levers of Change used to aid patients in their recovery as well as preventative interventions.

Advances in Experimental Social Psychology, 2024-06-03. The Advances in Experimental Social Psychology series is the premier outlet for reviews of mature, high impact research programs in social psychology. Contributions to the series provide defining pieces of established research programs, reviewing and integrating thematically related findings by individual scholars or research groups. Topics discussed in Volume 70 include narrative transportation, group life and personal agency, victimhood and morality, goal pursuit and risk behavior, and identity fusion. Provides one of the most cited series in the field of experimental social psychology. Contains contributions of major empirical and theoretical interest. Represents the best and brightest in new research theory and practice in social psychology.

The Neuroscience of Human Relationships Louis Cozolino, 2014-03-24. A revised edition of the best selling text on how relationships build our brains. As human beings, we cherish our individuality, yet we know that we live in constant relationship to others and that other people play a significant part in regulating our emotional and social behavior. Although this interdependence is a reality of our existence, we are just beginning to understand that we have evolved as social creatures with interwoven brains and biologies. The human brain itself is a social organ and to truly understand being human, we must understand not only how we as whole people exist with others, but how our brains themselves exist in relationship to other brains. The first edition of this book tackled these important questions of interpersonal neurobiology, that the brain is a social organ built through experience using poignant case examples from the author's years of clinical experience. Brain drawings and elegant explanations of social neuroscience wove together emerging findings from the research literature to bring neuroscience to the stories of our lives. Since the publication of the first edition in 2006, the field of social neuroscience has grown at a mind-numbing pace. Technical advances now provide more windows into our inner neural universe and terms like attachment

empathy compassion and mindfulness have begun to appear in the scientific literature Overall there has been a deepening appreciation for the essential interdependence of brain and mind More and more parents teachers and therapists are asking how brains develop grow connect learn and heal The new edition of this book organizes this cutting edge abundant research and presents its compelling insights reflecting a host of significant developments in social neuroscience Our understanding of mirror neurons and their significance to human relationships has continued to expand and deepen and is discussed here Additionally this edition reflects the gradual shift in focus from individual brain structures to functional neural systems an important and necessary step forward A great deal of neural overlap has been discovered in brain activation when we are thinking about others and ourselves This raises many questions including how we come to know others and whether the notion of an individual self is anything more than an evolutionary strategy to support our interconnection In short we are just beginning to see the larger implications of all neurological processes how the architecture of the brain can help us to better understand individuals and our relationships This book gives readers a deeper appreciation of how and why relationships have the power to reshape our brains throughout our life

Shapiro,Jeffrey S. Applegate,2018-08-28 Demystifying neurobiology and presenting it anew for the social work audience The art and science of relationship are at the core of clinical social work Research in neurobiology adds a new layer to our understanding of the protective benefits of relationship and specifically to our understanding of the neurobiology of attachment and early brain development This second edition of Neurobiology for Clinical Social Work explores the application of recent research in neuroscience to prevention and intervention in multiple systems settings and areas such as the neurobiology of stress and the stress response system the impact of early adversity and toxic stress on brain development early childhood and adolescent brain development and the application of this science to prevention and intervention in areas such as child welfare and juvenile justice Social workers collaborate with individuals families communities and groups that experience adversity and at times traumatic stressors Research in neuroscience adds to our models of risk and resilience informing our understanding of the processes by which adversity and trauma impact multiple indicators of wellbeing across time Social workers can use this knowledge to inform their work and to support the neuroprotective benefit of relationship in the lives of individuals families and communities This text provides essential information for cutting edge social work practice

Introduction to Social Neuroscience Stephanie Cacioppo,John T. Cacioppo,2020-08-11 Humans like many other animals are highly social species But what exactly makes us social How do our biological systems implement social behavior And in turn how do these social processes impact our brain and biology These are the questions that define the young field of social neuroscience a field that combines the study of animal models and humans in order to understand the neural hormonal cellular and genomic mechanisms underlying social processes and behaviors such as imitation loneliness empathy and cooperation Intended for advanced undergraduates and graduate students this is the first textbook to provide a synthetic approach to social neuroscience Here students and scholars are introduced to the field by examining a growing body of evidence that shows that the nervous system cannot be understood without consideration of the social environments in which humans and many animal species live The first three chapters introduce readers to the neurological basis for social behavior and the concept of the social brain Chapters four through six discuss how mental states are communicated between people And chapters seven through nine cover the neural roots of social interactions and group thought patterns Ultimately this book demonstrates how the brain mediates social behaviour and provides a foundational textbook for this nascent field

Healing Trauma Marion F Solomon,Judith Siegel,2003-02-25 Born out of the excitement of a convergence of ideas and

passions this book provides a synthesis of the work of researchers clinicians and theoreticians who are leaders in the field of trauma attachment and psychotherapy As we move into the third millennium the field of mental health is in an exciting position to bring together diverse ideas from a range of disciplines that illuminate our understanding of human experience neurobiology developmental psychology traumatology and systems theory The contributors emphasize the ways in which the social environment including relationships of childhood adulthood and the treatment milieu change aspects of the structure of the brain and ultimately alter the mind

Brains as Engines of Association Dale Purves,2019-04-01

Brains as Engines of Association tackles a fundamental question in neuroscience what is the operating principle of the human brain While a similar question has been asked and answered for virtually every other human organ during the last few centuries how the brain operates has remained a central challenge in biology Based on evidence derived from vision audition speech and music much of it based on the author s own work over the last twenty years Brains as Engines of Association argues that brains operate wholly on the basis of trial and error experience encoded in neural circuitry over evolutionary and individual time This concept of neural function runs counter to current concepts that view the brain as a computing machine and research programs based on the idea that the only way to answer such questions is by reconstructing the connectivity of brains in their entirety This view also implies that the best way to understand the details of brain function is to recapitulate their history using artificial neural networks While this viewpoint has received support in the last few years from work showing that computers can win complex games the brain plays a much more complex game the game of biological survival which Purves concludes is based on trial and error experience

Human Communication and the Brain Donald B.

Egolf,2012-04-05 Human Communication and the Brain Building the Foundation for the Field of Neurocommunications by Donald B Egolf provides an introduction to the latest neuroscience research and expands its applications to the study of communication Egolf explores both methodological and ethical issues that are surfacing as a result of the newest findings revealing important new questions about the nature of communication and the brain including is there a way to communicate directly with the brain What outside powers should be permitted to access that method of information dissemination Egolf s text has implications for a number of communication subsets including intrapersonal interpersonal political marketing and deception and this new research undoubtedly will provoke debate amongst communication and neuroscience scholars for years to come
