Present Approach to Traffic Flow Theory and Research in Civil and Transportation Engineering Elżbieta Macioszek, Grzegorz Sierpiński, 2022-01-03 This book presents many valuable tips for making decisions related to traffic flow in the transport networks. The knowledge base in practical examples as well as the decision support systems described in this book finds interest among people who face the daily challenge of searching for solutions to the problems of contemporary transport networks and systems. The publication is therefore addressed to local authorities related to the planning and development of development strategies for selected areas with regard to transport both in the urban and regional dimension and to representatives of business and industry as people directly involved in the implementation of traffic engineering solutions. The tips contained in individual sections of the publication allow to look at a given problem in an advanced way and facilitate the selection of the appropriate strategy among others in relation to the evaluation of BEV and FCHEV electric vehicles in the creation of a sustainable transport systems development of ecological public transport on the example of selected cities impact of drivers waiting time on the gap acceptance at median uncontrolled T intersections. In turn due to a new approach to theoretical models including *inter alia* the application of genetic algorithms for the planning of urban rail transportation system comprehensive estimate of life cycle costs of new technical systems using reliability verification algorithm application and comparison of machine learning algorithms in traffic signals prediction the publication also interests scientists and researchers carrying out research in this area Internet of Things A to Z Qusay F.

Internet of Things A to Z Qusay F. Hassan, 2025-10-14 A fully updated guide to cutting edge Internet of Things IoT technology. The Internet of Things IoT has revolutionized the way we interact with technology in a highly connected world bringing a host of new objects and points of entry into global communications networks. Internet of Things A to Z Technologies and Applications Second Edition is a thorough and accessible resource to IoT for undergraduate and postgraduate students as well as practitioners and implementers. With a contributor team led by an editor who has decades of experience in information and communication technology ICT it covers all foundational subjects for understanding IoT. Now fully updated to reflect the latest developments in the field it is an indispensable volume for students researchers and IT learners looking to keep pace with this rapidly growing technology. Organized into five thematic parts this edition offers foundational theory emerging technologies domain specific applications security and trust models and hands on tutorials that bridge theory and practice. Each chapter offers a research informed overview with extensive references making the book equally valuable as a course text and a scholarly reference. Readers of the second edition will also find three additional chapters covering applications of artificial intelligence machine learning and deep learning including information on the Internet of Military Things. Detailed chapters on IoT architecture and ecosystems security issues such as trust management and IoT authentication methods big data analytics and more. Expanded treatment of essential technologies not covered in the first edition including edge computing and edge

intelligence with coverage of applications such as tinyML Digital Twins AR VR and the metaverse Practical tutorials on building IoT prototypes and developing streaming data pipelines using widely adopted tools and platforms New information on design and prototyping including updated hardware boards and instructions Internet of Things A to Z Technologies and Applications Second Edition is ideal for students interested in the Internet of Things ICT researchers industry professionals and lifetime IT learners seeking a comprehensive and up to date reference that connects theory with real world implementation

[Data Spaces](#) Edward Curry,Simon Scerri,Tuomo Tuikka,2022-09-08 This open access book aims to educate data space designers to understand what is required to create a successful data space It explores cutting edge theory technologies methodologies and best practices for data spaces for both industrial and personal data and provides the reader with a basis for understanding the design deployment and future directions of data spaces The book captures the early lessons and experience in creating data spaces It arranges these contributions into three parts covering design deployment and future directions respectively The first part explores the design space of data spaces The single chapters detail the organisational design for data spaces data platforms data governance federated learning personal data sharing data marketplaces and hybrid artificial intelligence for data spaces The second part describes the use of data spaces within real world deployments Its chapters are co authored with industry experts and include case studies of data spaces in sectors including industry 4 0 food safety FinTech health care and energy The third and final part details future directions for data spaces including challenges and opportunities for common European data spaces and privacy preserving techniques for trustworthy data sharing The book is of interest to two primary audiences first researchers interested in data management and data sharing and second practitioners and industry experts engaged in data driven systems where the sharing and exchange of data within an ecosystem are critical
