The Neurobiology of the Gods Erik D. Goodwyn, 2012-03-15 Where does science end and religion begin Can spiritual images and feelings be understood on a neurobiological level without dismissing their power and mystery In this book psychiatrist Erik Goodwyn addresses these questions by reviewing decades of research putting together a compelling argument that the emotional imagery of myth and dreams can be traced to our deep brain physiology and importantly how a sensitive look at this data reveals why mythic or religious symbols are indeed more godlike than we might have imagined The Neurobiology of the Gods weaves together Jungian depth psychology with research in evolutionary psychology neuroanatomy cognitive science neuroscience anthropology mental imagery dream research and metaphor theory into a comprehensive model of how our brains contribute to the recurrent images of dreams myth religion and even hallucinations Divided into three sections this book provides definitions and foundations an examination of individual symbols conclusive thoughts on how brain physiology shapes the recurring images that we experience Goodwyn shows how common dream myth and religious experiences can be meaningful and purposeful without discarding scientific rigor The Neurobiology of the Gods will therefore be essential reading for Jungian analysts and psychologists as well as those with an interest in philosophy anthropology and the interface between science and religion

Vygotsky and Cognitive Science William Frawley, 1997 Is a human being a person or a machine Is the mind a social construction or a formal device It is both William Frawley tells us and by bringing together Vygotsky's sociocultural theory of the mind and cognitive science's computational model he shows us how this not only can but must be To do so Frawley focuses on language particularly on how the computational mind uses language to mediate the internal and the external during thought By reconciling the linguistic device and the linguistic person he argues for a Vygotskian cognitive science Frawley begins by exploding the internalist externalist dichotomy that presently drives cognitive science and falsely

pits computationalism against socioculturalism He replaces the reigning Platonic paradigm of computational mind science with a framework based on an unusual unified account of Wittgenstein thus setting the stage for a Vygotskian cognitive science centered on three aspects of mind subjectivity real time operation and breakdown In this context he demonstrates how computational psychology accommodates a critical aspect of Vygotskian theory private speech as the mind's metacomputational regulator An examination of certain congenital disorders such as Williams Syndrome Turner Syndrome and autism that disrupt speech further clarifies the issue of computational and cognitive control

Consciousness and the Ontology of Properties Mihretu P. Guta, 2018-07-20 This book aims to show the centrality of a proper ontology of properties in thinking about consciousness Philosophers have long grappled with what is now known as the hard problem of consciousness i.e how can subjective or qualitative features of our experience such as how a strawberry tastes arise from brain states More recently philosophers have incorporated what seems like promising empirical research from neuroscience and cognitive psychology in an attempt to bridge the gap between measurable mental states on the one hand and phenomenal qualities on the other In *Consciousness and the Ontology of Properties* many of the leading philosophers working on this issue as well as a few emerging scholars have written 14 new essays on this problem The essays address topics as diverse as substance dualism mental causation the metaphysics of artificial intelligence the logic of conceivability constitution extended minds the emergence of consciousness and neuroscience and the unity and neural correlates of consciousness but are nonetheless unified in a collective objective the need for a proper ontology of properties to understand the hard problem of consciousness both on non empirical and empirical grounds
