Henning Glaser, Pindar Wong, 2025-02-28 We are living in times of deep and disruptive change Perhaps the most powerful vector of this change can be described by three related catchphrases digitalization artificial intelligence and dataism

**Robot** Hans P. Moravec, 1999 In

this compelling book Hans Moravec predicts that machines will attain human levels of intelligence by the year 2040 and that by 2050 they will surpass us But even though Moravec predicts the end of the domination by human beings his is not a bleak vision Far from railing against a future in which machines rule the world Moravec embraces it taking the startling view that intelligent robots will actually be our evolutionary heirs Intelligent machines which will grow from us learn our skills and share our goals and values can be viewed as children of our minds And since they are our children we will want them to outdistance us In fact in a bid for immortality many of our descendants will choose to transform into ex humans as they upload themselves into advanced computers This provocative new book the highly anticipated follow up to his bestselling volume *Mind Children* charts the trajectory of robotics in breathtaking detail A must read for artificial intelligence technology and computer enthusiasts Moravec's freewheeling but informed speculations present a future far different than we ever dared imagine

*Religion and the Technological Future* Calvin Mercer, Tracy J. Trothen, 2021-02-22 We live in an age of rapid technological advancement Never before has humankind wielded so much power over our own biology Biohacking the attempt at human enhancement of physical cognitive affective moral and spiritual traits has become a global phenomenon This textbook introduces religious and ethical implications of biohacking artificial intelligence and other technological changes offering perspectives from monotheistic and karmic religions and applied ethics These technological breakthroughs are transforming our societies and ourselves fundamentally via genetic modification tissue engineering artificial intelligence robotics the merging of computer technology with human biology extended reality brain stimulation and nanotechnology The book also considers the extreme possibilities of mind uploading cryonics and superintelligence Chapters explore some of the political economic sociological and psychological dimensions of these advances with bibliographies for further study and questions for discussion The technological future is here and it is up to us to decide its moral and religious
