Ontology Alignment Bridging The Semantic Gap Semantic Web And Beyond:

Ontology Alignment Marc Ehrig, 2006-12-22 This book introduces novel methods and approaches for semantic integration. In addition to developing ground breaking new methods for ontology alignment the author provides extensive explanations of up to date case studies. It includes a thorough investigation of the foundations and provides pointers to future steps in ontology alignment with conclusion linking this work to the knowledge society.

The Semantic Web Karl Aberer, 2007-10-22 This book constitutes the refereed proceedings of the joint 6th International Semantic Web Conference ISWC 2007 and the 2nd Asian Semantic Web Conference ASWC 2007 held in Busan Korea in November 2007. The 50 revised full academic papers and 12 revised application papers presented together with 5 Semantic Web Challenge papers and 12 selected doctoral consortium articles were carefully reviewed and selected from a total of 257 submitted papers to the academic track and 29 to the applications track. The papers address all current issues in the field of the semantic Web ranging from theoretical and foundational aspects to various applied topics such as management of semantic Web data, ontologies, semantic Web architecture, social semantic Web as well as applications of the semantic Web. Short descriptions of the top five winning applications submitted to the Semantic Web Challenge competition conclude the volume.

Ontology Matching Jérôme Euzenat, Pavel Shvaiko, 2007-06-15 Ontologies are viewed as the silver bullet for many applications but in open or evolving systems different parties can adopt different ontologies. This increases heterogeneity problems rather than reducing heterogeneity. This book proposes ontology matching as a solution to the problem of semantic heterogeneity offering researchers and practitioners a uniform framework of reference to currently available work. The techniques presented apply to database schema matching, catalog integration, XML schema matching and more.

Social Networks and the Semantic Web Peter Mika, 2007-10-23 Science is like a tree contrary to popular belief both trees and science grow at their edges not at their core. For science this means that most of the fruitful and exciting developments are not happening at the core of established fields but are instead happening at the boundaries between such fields. This has been particularly true for Computer Science. The most interesting database developments don't happen inside the Database community but rather where databases hit Biology. Similarly the most interesting developments in Artificial Intelligence in recent years have happened where AI met the Web. The young field of Semantic Web research has been one of the results of a number of different sub-fields of Computer Science being exposed to the challenges of the Web: databases, computational linguistics, knowledge representation, knowledge based systems and service oriented computing are just some of the sub-fields that are all making contributions to the Semantic Web vision namely a Web that consists not only of links between web pages full of pictures and text but of a Semantic Web that consists of links between computer interpretable data. Such a Semantic Web would make it possible to query and reason over integrated data sets consisting of separate pieces of information that were never intended to be linked together but that can nevertheless be fruitfully combined and integrated sometimes even by a third party who neither wrote nor

owns any of the original pieces of data just as is possible with web pages on the current Web Ontology Engineering in a Networked World Mari Carmen Suárez-Figueroa, Asunción Gómez-Pérez, Enrico Motta, Aldo Gangemi, 2012-03-23 The Semantic Web is characterized by the existence of a very large number of distributed semantic resources which together define a network of ontologies. These ontologies in turn are interlinked through a variety of different meta relationships such as versioning, inclusion and many more. This scenario is radically different from the relatively narrow contexts in which ontologies have been traditionally developed and applied and thus calls for new methods and tools to effectively support the development of novel network oriented semantic applications. This book by Suárez-Figueroa et al provides the necessary methodological and technological support for the development and use of ontology networks which ontology developers need in this distributed environment. After an introduction in its second part the authors describe the NeOn Methodology framework. The book's third part details the key activities relevant to the ontology engineering life cycle. For each activity a general introduction, methodological guidelines and practical examples are provided. The fourth part then presents a detailed overview of the NeOn Toolkit and its plug-ins. Lastly case studies from the pharmaceutical and the fishery domain round out the work. The book primarily addresses two main audiences: students and their lecturers who need a textbook for advanced undergraduate or graduate courses on ontology engineering and practitioners who need to develop ontologies in particular or Semantic Web based applications in general. Its educational value is maximized by its structured approach to explaining guidelines and combining them with case studies and numerous examples. The description of the open source NeOn Toolkit provides an additional asset as it allows readers to easily evaluate and apply the ideas presented. Cases on Semantic Interoperability for Information Systems Integration: Practices and Applications Kalfoglou, Yannis, 2009-10-31 This book presents the use of semantic interoperability for a variety of applications ranging from manufacturing to tourism, e-commerce, energy, grids, integration, geospatial systems, interoperability and automated agents interoperability for web services.
