Natural Language Parsing Systems Symbolic Computation:

Natural Language Parsing Systems Leonard Bolc,2012-12-06 Up to now there has been no scientific publication on natural lan guage research that presents a broad and complex description of the current problems of parsing in the context of Artificial Intelli gence However there are many interesting results from this domain appearing mainly in numerous articles published in pro fessional journals In view of this situation the objective of this book is to enable scientists from different countries to present the results of their research on natural language parsing in the form of more detailed papers than would be possible in professional jour nals This book thus provides a collection of studies written by well known scientists whose earlier publications have greatly contributed to the development of research on natural language parsing Jaime G Carbonell and Philip J Hayes present in their paper Robust Parsing Using Multiple Construction Specific Strategies two small experimental parsers implemented to illustrate the advantages of a multi strategy approach to parsers with strategies selected according to the type of construction being parsed at any given time This presentation is followed by the description of a parsing algorithm integrating some of the best features of the two smaller parsers including case frame instantiation and partial pat tern matching strategies *Natural Language Parsing Systems* J. G. Carbonell,K. W. Church,W. Dilger,1987-09-30 **User Models in Dialog Systems** Alfred Kobsa,Wolfgang Wahlster,2012-12-06 User models have recently attracted much research interest in the field of artificial intelligence dialog systems It has become evident that flexible user oriented dialog behavior of such systems can be achieved only if the system has access to a model of the user containing assumptions about his her background knowledge as well as his her goals and plans in consulting the system Research in the field of user models investigates how such assumptions can be automatically created represented and exploited by the system in the course of an on line interaction with the user The communication medium in this interaction need not necessarily be a natural language such as English or German Formal interaction languages are also permit ted The emphasis is placed on systems with natural language input and output however A dozen major and several more minor user modeling systems have been de signed and implemented in the last decade mostly in the context of natural language dialog systems The goal of UM86 the first international workshop on user model ing was to bring together the researchers working on these projects so that results could be discussed and analyzed and hopefully general insights be found that could prove useful for future research The meeting took place in Maria Laach a small village some 40 miles south of Bonn West Germany 25 prominent researchers were invited to participate **Computational Models of Natural Language Processing** Bruno G. Bara,Giovanni Guida,1984 Catalogue of Artificial Intelligence Techniques Alan Smaill,Alan Bundy,2012-12-06 The purpose of the Catalogue of Artificial Intelligence Techniques is to promote interaction between members of the AI community It does this by announcing the existence of AI techniques and acting as a pointer into the literature Thus the AI community will have access to a common extensional definition of the field which will promote a common terminology

discourage the reinvention of wheels and act as a clearing house for ideas and algorithms The catalogue is a reference work providing a quick guide to the AI techniques available for different jobs It is not intended to be a textbook like the Artificial Intelligence Handbook Intentionally it only provides a brief description of each technique with no extended discussion of its historical origin or how it has been used in particular AI programs The original version of the catalogue was hastily built in 1983 as part of the UK SERC DoI IKBS Architecture Study It was adopted by the UK Alvey Programme and during the life of the programme was both circulated to Alvey grant holders in hard copy form and maintained as an on line document A version designed for the international community was published as a paperback by Springer Verlag All these versions have undergone constant revision and refinement Springer Verlag has agreed to reprint the catalogue at frequent intervals in order to keep it up to date and this is the third edition of their paperback version   **Uncertainty and Vagueness in Knowledge Based Systems** Rudolf Kruse,Erhard Schwecke,Jochen Heinsohn,2012-12-06 The primary aim of this monograph is to provide a formal framework for the representation and management of uncertainty and vagueness in the field of artificial intelligence It puts particular emphasis on a thorough analysis of these phenomena and on the development of sound mathematical modeling approaches Beyond this theoretical basis the scope of the book includes also implementational aspects and a valuation of existing models and systems The fundamental ambition of this book is to show that vagueness and un certainty can be handled adequately by using measure theoretic methods The presentation of applicable knowledge representation formalisms and reasoning algorithms substantiates the claim that efficiency requirements do not necessar ily require renunciation of an uncompromising mathematical modeling These results are used to evaluate systems based on probabilistic methods as well as on non standard concepts such as certainty factors fuzzy sets or belief functions The book is intended to be self contained and addresses researchers and practioneers in the field of knowledge based systems It is in particular suit able as a textbook for graduate level students in AI operations research and applied probability A solid mathematical background is necessary for reading this book Essential parts of the material have been the subject of courses given by the first author for students of computer science and mathematics held since 1984 at the University in Braunschweig   An Introduction to Default Logic Philippe Besnard,2013-04-17 This book is written for those who are interested in a fonnalization of human reasoning especially in order to build intelligent computer systems Thus it is mainly designed for the Artificial Intelligence community both students and researchers although it can be useful for people working in related fields like cognitive psychology The major theme is not Artificial Intelligence applications although these are discussed throughout in sketch fonn Rather the book places a heavy emphasis on the fonnal development of default logic results and problems Default logic provides a fonnalism for an important part of human reasoning Default logic is specifically concerned with common sense reasoning which has recently been recognized in the Artificial Intelligence literature to be of fundamental importance for knowledge representation Previously fonnalized reasoning systems failed in

real world environments though succeeding with an acceptable ratio in well defined environments This situation enabled empirical explorations and the design of systems without theoretical justification In particular they could not be compared since there was no basis to judge their respective merits Default logic turned out to be very fruitful by proving the correctness of some of them We hope that this book will initiate other successful developments in default logic *Natural Language Processing* Richard E. Cullingford,1986 **Kybernetika** ,1989 *AI Magazine* ,1988 **Parallel Natural Language Processing** Geert Adriaens,Udo Hahn,1994 Parallel processing is not only a general topic of interest for computer scientists and researchers in artificial intelligence but it is gaining more and more attention in the community of scientists studying natural language and its processing computational linguists AI researchers psychologists The growing need to integrate large divergent bodies of knowledge in natural language processing applications or the belief that massively parallel systems are the only ones capable of handling the complexities and subtleties of natural language are just two examples of the reasons for this increasing interest **Encyclopedia of Library and Information Science, Second Edition -** Miriam Drake,2003-05-20 A revitalized version of the popular classic the Encyclopedia of Library and Information Science Second Edition targets new and dynamic movements in the distribution acquisition and development of print and online media compiling articles from more than 450 information specialists on topics including program planning in the digital era recruitment information management advances in digital technology and encoding intellectual property and hardware software database selection and design competitive intelligence electronic records preservation decision support systems ethical issues in information online library instruction telecommuting and digital library projects Peterson's Annual Guides to Graduate Study ,1982-12 Natural Language Generation Systems David D. McDonald,Leonard Bolc,2012-12-06 Natural language generation is a field within artificial intelligence which looks ahead to the future when machines will communicate complex thoughts to their human users in a natural way Generation systems supply the sophisticated knowledge about natural languages that must come into play when one needs to use wordings that will overpower techniques based only on symbolic string manipulation techniques Topics covered in this volume include discourse theory mechanical translation deliberate writing and revision Natural Language Generation Systems contains contributions by leading researchers in the field Chapters contain details of grammatical treatments and processing seldom reported on outside of full length monographs Computer Language ,1987 *Proceedings of the 13th Conference on Computational Linguistics - Volume 1* Hans Karlgren,1990 *Encyclopedia of Language & Linguistics* E.
