Confectionery and Chocolate Engineering Ferenc A. Mohos, 2010-11-29 Confectionery and chocolate manufacture has been dominated by large scale industrial processing for several decades. It is often the case though that a trial and error approach is applied to the development of new products and processes rather than verified scientific principles. The purpose of this book is to describe the features of unit operations used in confectionery manufacturing. In contrast to the common technology focused approach to this subject this volume offers a scientific theoretical account of confectionery manufacture building on the scientific background of chemical engineering. The large diversity of both raw materials and end products in the confectionery industry makes it beneficial to approach the subject in this way. The industry deals with a variety of vegetable based raw materials as well as milk products eggs gelatin and other animal based raw materials. A study of confectionery and chocolate engineering must therefore examine the physical and chemical as well as the biochemical and microbiological properties of the processed materials. By characterizing the unit operations of confectionery manufacture the author who has over 40 years experience in confectionery manufacture aims to open up new possibilities for improvement relating to increased efficiency of operations the use of new materials and new applications for traditional raw materials. The book is aimed at food engineers scientists technologists in research and industry as well as graduate students on relevant food and chemical engineering related courses. **Confectionery and Chocolate Engineering** Ferenc A.

Since the publication of the first edition of Industrial Chocolate Manufacture and Use in 1988 it has become the leading technical book for the industry From the beginning it was recognised that the complexity of the chocolate industry means that no single person can be an expert in every aspect of it For example the academic view of a process such as crystallisation can be very different from that of a tempering machine operator so some topics have more than one chapter to take this into account It is also known that the biggest selling chocolate in say the USA tastes very different from that in the UK so the authors in the book were chosen from a wide variety of countries making the book truly international Each new edition is a mixture of updates rewrites and new topics In this book the new subjects include artisan or craft scale production compound chocolates and sensory This book is an essential purchase for all those involved in the manufacture use and sale of chocolate containing products especially for confectionery and chocolate scientists engineers and technologists working both in industry and academia The new edition also boasts two new co editors Mark Fowler and Greg Ziegler both of whom have contributed chapters to previous editions of the book Mark Fowler has had a long career at Nestle UK working in Cocoa and Chocolate research and development he is retiring in 2013 Greg Ziegler is a professor in the food science department at Penn State University in the USA

*Science of Sugar Confectionery* William P Edwards, 2007-10-31 Confectionery is a topic close to many people's hearts and its manufacture involves some interesting science. The confectionery industry is divided into three classes chocolate flour and sugar confectionery. It is the background science of this latter category that is covered in *The Science of Sugar Confectionery*. The manufacture of confectionery is not a science based industry as these products have traditionally been created by skilled confectioners working empirically. In fact scientific understanding of the production process has only been acquired retroactively. Historically however sugar confectionery has had technological synergies with the pharmaceutical industry such as making sugar tablets and applying panned sugar coatings. This book gives an introduction to the subject with some basic definitions and commonly used ingredients and then moves on to discuss the chemistry of various types of sugar confectionery. These include sugar glasses, boiled sweets, grained sugar products, fondants, toffees and fudges, hydrocolloids, gums, pastilles and jellies and concludes with a chapter dedicated to sugar free confectionery.

*Science of Sugar Confectionery* William P Edwards, 2018-10-26 Since the first edition of *The Science of Sugar Confectionery* 2000 the confectionery industry has responded to ever changing consumer habits. This new edition has been thoroughly revised to reflect industry's response to market driven nutrition and dietary concerns as well as changes in legislation, labelling and technology. Building on the strengths of the first edition the author's personal knowledge and experience of the sugar confectionery industry is used to provide a thorough and accessible account of the field. Written so the reader needs no more than a rudimentary level of chemistry this book covers the basic definitions commonly used and new ingredients in the industry. It then discusses the various types of sugar confectionery including sugar glasses, boiled sweets, grained sugar products, fondants, toffees and fudges, hydrocolloids, gums, pastilles and jellies and concludes with a new chapter on future outlooks. Featuring expanded coverage of special dietary needs covering topics such as vegetarianism and veganism, religious requirements and supplemented products this new edition reflects current and evolving needs in the sugar confectionery field.
