on going and future increasing demand of animal source foods and to ensure good health of animals Finally as we search for quantum leaps in productivity novel and innovative technological solutions need to be put in the practice to achieve these envisaged goals 1 Studies focused on sustainable animal production particularly those centred on the principle of clean green and ethical animal management systems 2 Disease management including transboundary diseases zoonoses of course and control strategies 3 Studies focusing on alternatives to antibiotic use in animal health and production systems and mitigation of AMR threat 4 Mechanistic studies focused on the host pathogen interactions 5 Practice and the development of novel and classical therapeutics aimed at improving health and production 6 Studies using innovative technological and bioinformatic tools to address the pressing issues relevant to animal health and production 7 Studies focused on bringing the animal production systems on the path to climate neutrality
