Artificial Intelligence in Healthcare Tianhua Chen, Jenny Carter, Mufti Mahmud, Arjab Singh Khuman, 2022-10-25 Recent advances in artificial intelligence AI and machine learning have witnessed many successes in various disciplines including the healthcare sector. Innovations in intelligent medical systems have revolutionized the way in which healthcare services are provided ranging from making clinical diagnosis, developing personalized treatment and drugs, assisting patient monitoring to automating administrative tasks and reducing operational costs. In this book, the authors present key applications in the general area of health care where AI has made significant successes. From the individual chapters, the readers will be provided with a range of examples to illustrate the wide plethora of application domains utilizing state of the art AI techniques, proving credence to the versatility and effectiveness of an AI approach in health care and medicine. What will be presented is in no means an exhaustive list of applications but most definitely a varied one. **Computational Intelligence for Oncology and Neurological Disorders** Mrutyunjaya Panda, Ajith Abraham, Biju Gopi, Reuel Ajith, 2024-07-15 With the advent of computational intelligence based approaches such as bio inspired techniques and the availability of clinical data from various complex experiments, medical consultants, researchers, neurologists and oncologists, there is huge scope for CI based applications in medical oncology and neurological disorders. This book focuses on interdisciplinary research in this field, bringing together medical practitioners dealing with neurological disorders and medical oncology along with CI investigators. The book collects high quality original contributions containing the latest developments or applications of practical use and value, presenting interdisciplinary research and review articles in the field of intelligent systems for computational oncology and neurological disorders. Drawing from work across computer science, physics, mathematics, medical science, psychology, cognitive science, oncology and neurobiology, among others, it combines theoretical, applied, computational, experimental and clinical research. It will be of great interest to any neurology or oncology researchers focused on computational approaches. ARTIFICIAL INTELLIGENCE: A MODERN APPROACH IN DIFFERENT FIELDS Prof. Rashmi Pant, Dr. Vibha Pandey & Dr. Pradeep Pandey, 2024-12-16 While highlighting the advantages of Artificial intelligence AI in enhancing human memory, creativity and decision making in daily life, the review paper also notes the difficulties and vulnerabilities involved in implementing AI. The encoding, storing and retrieval of our experiences are powered by human memory. AI has the ability to both facilitate and impede memory encoding and retrieval as well as aid in our knowledge of the problems facing memory research. An artist's own creative abilities may be compromised if they depend too much on AI generated features. When AI systems offer ready to eat concepts, people could become unduly dependent on them rather than making their own independent creative thought processes.
