**Personalization and Digital Social Markets** Tahir M. Nisar, 2025-01-09 Tahir Nisar presents a cogent compelling account of recent developments and disruptions within the digital economy and particularly within the industrial and service sectors Through an original overarching framework rooted in the concept of personalization and its antecedents Nisar identifies radically new forms of relationships both economic and social among firms and customers These new relationships are driving major changes in commercial and industrial firms policies and practices and in turn in the entire market economy E commerce trading user generated content virtual communities co creation influencer movements FinTech and sharing economies have strengthened the hands of consumers and have encouraged developments in cognitive technologies such as AI automation which in turn create new ways of working and disruptions to traditional capital labour relations Ultimately what emerges from this study is a picture of how digital technologies unleash forces of change that are creating new forms of social and economic sharing arrangements and new forms of social organization For its empirical depth and and theoretical rigor this book is essential reading for researchers and students interested in emerging alternative forms of economics business and management and particularly those interested in the digital economy and the state and future of capitalist markets

Regulating Gig Work Joellen Riley Munton, Michael Rawling, 2023-12-12 Digital revolution demands new approaches to regulating work The Uberisation of work is not in reality a new phenomenon It reintroduces the practices of on demand engagement of labour common prior to the development of continuing employment What is new however is the capacity of digital technology to engage labour in ways that avoid characterisation as employment according to the legal tests developed in the 20th century This book tackles the challenge of ensuring that the emerging tribes of gig workers in labour markets across the globe are afforded decent standards of work This book discusses how to provide decent conditions and safe working standards for on demand workers engaged through digital platforms It interrogates the rise of gig work and the legal strategies that might be engaged to deal with the risk that on demand work will fall and remain outside of employment protections It draws on observations of practices across the globe but focusses particularly on regulatory solutions developed in Australia The book will be a useful reference to policy making and legal reforms to address vulnerabilities of gig workers

**Foreign Direct Investment in Latin America and the Caribbean 2017** United Nations. Economic Commission for Latin America and the Caribbean, 2018-01-15 This publication sets out and analyses the main foreign direct investment FDI trends in the countries of Latin America and the Caribbean The 2017 edition shows that the region is at a difficult juncture FDI inflows declined by 7.9% in 2016 to US 167.043 billion representing a cumulative fall of 17.0% since the peak in 2011 The fall in commodity prices continues to affect investments in natural resources sluggish economic growth in several countries has slowed the flow of market seeking capital and the global backdrop of technological sophistication and expansion of the digital economy has concentrated transnational investments in developed economies

**Svensk-engelsk fackordbok för näringsliv, förvaltning, undervisning och forskning, [A Swedish-English dictionary of technical terms used in business, industry, administration, education and research]** Ingvar Emanuel Gullberg, 1964

Pricing on Two-Sided Market of Ride-Sharing Platform Chien-Yu Lai, 2021 Ride sharing platforms match riders and drivers by setting two prices One price is what riders pay the other is what drivers receive There is no bargaining process between riders and drivers and there is also no direct transaction between these two sides Thus we may think of this market as two sided We model equilibrium in this two sided market by endogenizing the number of riders and drivers and the two prices In this paper we study how rider's price affects the equilibrium outcome From Lyft's market level experiment on changing rider's price we found higher rider's price decreases both rider's demand and waiting time and it also decreases driver's supply and utilization in the equilibrium We also compare the demand elasticities from market level price treatment and individual level price treatment and we found that the former is smaller than the later in absolute value terms This helps us do simple welfare analysis for rider's price change From Lyft's driver side price treatments we detect scaling problem that higher driver price might harm drivers by increased competition between drivers

**Intermediated Surge Pricing** Sushil Bikhchandani, 2020 Although Uber and Lyft are known for their flexible surge pricing they are surprisingly rigid in another way each firm takes a constant percentage of passenger fare whether or not there is a surge In this paper I investigate the possible reasons for and the impact of this rigidity I study a market in which a profit maximizing intermediary facilitates trade between buyers and sellers The intermediary sets prices for buyers and sellers and keeps the difference as her fee Optimal prices increase when demand increases that is shifts right If a demand increase is due to an increase in the number of ex ante symmetric buyers then the intermediary's optimal percent fee decreases If instead a demand increase is due to a reduction in the elasticity of demand then the intermediary's optimal percent fee increases In either case if the intermediary keeps a constant percent fee regardless of shifts in demand as is the case with Uber and Lyft then surge pricing i.e. the ratio of price during high demand to price during low demand is amplified on one side of the market and diminished on the other

side Driver Surge Pricing Nikhil Garg, 2020 Ride hailing marketplaces like Uber and Lyft use dynamic pricing often called surge to balance the supply of available drivers with the demand for rides We study driver side payment mechanisms for such marketplaces presenting the theoretical foundation that has informed the design of Uber's new additive driver surge mechanism We present a dynamic stochastic model to capture the impact of surge pricing on driver earnings and their strategies to maximize such earnings In this setting some time periods surge are more valuable than others non surge and so trips of different time lengths vary in the induced driver opportunity cost First we show that multiplicative surge historically the standard on ride hailing platforms is not incentive compatible in a dynamic setting We then propose a structured incentive compatible pricing mechanism This closed form mechanism has a simple form and is well approximated by Uber's new additive surge mechanism Finally through both numerical analysis and real data from a ride hailing marketplace we show that additive surge is more incentive compatible in practice than is multiplicative surge **Pricing in Ride-Share**

**Platforms** Siddhartha Banerjee, 2016 We study optimal pricing strategies for ride sharing platforms such as Lyft Sidecar and Uber Analysis of pricing in such settings is complex On one hand these platforms are two sided this requires economic models that capture the incentives of both drivers and passengers On the other hand these platforms support high temporal resolution for data collection and pricing this requires stochastic models that capture the dynamics of drivers and passengers in the system In this paper we build a queueing theoretic economic model to study optimal platform pricing In particular we focus our attention on the value of dynamic pricing where prices can react to instantaneous imbalances between available supply and incoming demand We find two main results We first show that performance throughput and revenue under any dynamic pricing strategy cannot exceed that under the optimal static pricing policy i.e. one which is agnostic of stochastic fluctuations in the system load This result belies the prevalence of dynamic pricing in practice Our second result explains the apparent paradox we show that dynamic pricing is much more robust to fluctuations in system parameters compared to static pricing Thus dynamic pricing does not necessarily yield higher performance than static pricing however it lets platforms realize the benefits of optimal static pricing even with imperfect knowledge of system parameters

Thank you for downloading **Lyft Price Setup**. Maybe you have knowledge that, people have look numerous times for their chosen readings like this Lyft Price Setup, but end up in harmful downloads.

Rather than reading a good book with a cup of tea in the afternoon, instead they juggled with some infectious virus inside their laptop.
