2. A rectangular field is bounded by a fence on 3 sides and a straight stream on the fourth side. Find the dimensions of the field with the maximum area that can be enclosed with 1000 feet of fence.

$$x = \text{width}$$

$$y = 1000 - 2x$$

$$x = 250 \text{ ft}$$

$$y = \text{length}$$

$$A = x(1000 - 2x)$$

$$2x + y = 1000$$

$$A = 1000x - 2x^2$$

$$\frac{d^2p}{dx^2} = -4 < 0$$

$$A = x y$$

$$\frac{dp}{dx} = 1000 - 4x$$

$$0 = 1000 - 4x$$

Since the second derivative is negative at a critical point, 250 ft x 500 ft will be the maximum area.

*Optimization in Solving Elliptic Problems* Eugene G. D'yakonov, 2018-05-04 *Optimization in Solving Elliptic Problems* focuses on one of the most interesting and challenging problems of computational mathematics the optimization of numerical algorithms for solving elliptic problems It presents detailed discussions of how asymptotically optimal algorithms may be applied to elliptic problems to obtain numerical solutions meeting certain specified requirements Beginning with an outline of the fundamental principles of numerical methods this book describes how to construct special modifications of classical finite element methods such that for the arising grid systems asymptotically optimal iterative methods can be applied *Optimization in Solving Elliptic Problems* describes the construction of computational algorithms resulting in the required accuracy of a solution and having a pre determined computational complexity Construction of asymptotically optimal algorithms is demonstrated for multi dimensional elliptic boundary value problems under general conditions In addition algorithms are developed for eigenvalue problems and Navier Stokes problems The development of these algorithms is based on detailed discussions of topics that include accuracy estimates of projective and difference methods topologically equivalent grids and triangulations general theorems on convergence of iterative methods mixed finite element methods for Stokes type problems methods of solving fourth order problems and methods for solving classical elasticity problems Furthermore the text provides methods for managing basic iterative methods such as domain decomposition and multigrid methods These methods clearly developed and explained in the text may be used to develop algorithms for solving applied elliptic problems The mathematics necessary to understand the development of such algorithms is provided in the introductory material within the text and common specifications of algorithms that have been developed for typical problems in mathema

*Optimization in Elliptic Problems with Applications to Mechanics of Deformable Bodies and Fluid Mechanics* William G. Litvinov, 2012-12-06 This book is intended to be both a thorough introduction to contemporary research in optimization theory for elliptic systems with its numerous applications and a textbook at the undergraduate and graduate level for courses in pure or applied mathematics or in continuum mechanics Various processes of modern technology and production are described by elliptic partial differential equations Optimization of these processes reduces to optimization problems for elliptic systems The numerical solution of such problems is associated with the solution of the following questions 1 The setting of the optimization problem ensuring the existence of a solution on a set of admissible controls which is a subset of some infinite dimensional vector space 2 Reduction of the infinite dimensional optimization problem to a sequence of finite dimensional problems such that the solutions of the finite dimensional problems converge in a sense to the solution of the infinite dimensional problem 3 Numerical solution of the finite dimensional problems

Formulation and Numerical Solution of Quantum Control Problems Alfio Borzi, Gabriele Ciaramella, Martin Sprengel, 2017-07-06 This book provides an introduction to representative nonrelativistic quantum control problems and their theoretical analysis and

solution via modern computational techniques The quantum theory framework is based on the Schrödinger picture and the optimization theory which focuses on functional spaces is based on the Lagrange formalism The computational techniques represent recent developments that have resulted from combining modern numerical techniques for quantum evolutionary equations with sophisticated optimization schemes Both finite and infinite dimensional models are discussed including the three level Lambda system arising in quantum optics multispin systems in NMR a charged particle in a well potential Bose Einstein condensates multiparticle spin systems and multiparticle models in the time dependent density functional framework This self contained book covers the formulation analysis and numerical solution of quantum control problems and bridges scientific computing optimal control and exact controllability optimization with differential models and the sciences and engineering that require quantum control methods

**Optimal Design through the Sub-Relaxation Method** Pablo Pedregal, 2016-09-01 This book provides a comprehensive guide to analyzing and solving optimal design problems in continuous media by means of the so called sub relaxation method Though the underlying ideas are borrowed from other more classical approaches here they are used and organized in a novel way yielding a distinct perspective on how to approach this kind of optimization problems Starting with a discussion of the background motivation the book broadly explains the sub relaxation method in general terms helping readers to grasp from the very beginning the

driving idea and where the text is heading In addition to the analytical content of the method it examines practical issues like optimality and numerical approximation Though the primary focus is on the development of the method for the conductivity context the book s final two chapters explore several extensions of the method to other problems as well as formal proofs The text can be used for a graduate course in optimal design even if the method would require some familiarity with the main analytical issues associated with this type of problems This can be addressed with the help of the provided bibliography
