Ross, 1999-10-03 This text is the primary recommendation of the UK Engineering Council Faculty of Technology to all British universities as of approved standard and quality for use as a text for the Board's own examinations It introduces the fundamental concepts and principles of statics and stress analysis as the essential reading for first year engineering students Worked examples from the authors experience reinforce comprehension of key concepts Tutorial solutions with explanation in extended detail have been provided for students Key elements include use of free body diagrams to help problem solving coverage of composite materials torsion of circular and non circular sections and the matrix displacement method Introduces the fundamental concepts and principles of statistics and stress analysis and applies these concepts and principles to a large number of practical problems The primary recommendation of the UK Engineering Council Faculty of Technology to all British universities *Macro-Engineering and the Earth* U W Kitzing, E G Frankel, 1998-11 This work delivers ideas comments and projects on energy communications transport management human resources and financial and legal issues which macroengineering can contribute towards the solution of the Earth's environmental problems Some 20 engineers and scholars identify problems in the next century whose solutions

call for international policy planning and a more collaborative peaceful and prosperous world order Imaginative concepts employ forward thinking for applying technology in revolutionary projects The book presents results of research on a triple helical turbine capable of extracting vast amounts of energy from slow moving water an invention which could harness rivers and ocean currents rendering high dams with their political social and ecological implications redundant These turbines are already in mass production in the USA for use in the Gulf Stream to produce energy and hydrogen fuel and can also be used to harness power from the wind Another project for which the technology is already available will harvest solar energy by satellites stationed beyond our atmosphere and beam it to the Earth and yet another calls for planetary defence of Earth against asteroid collisions The environmental section discusses large projects for changing our climate planning and costing for a sub Mediterranean aqueduct connecting the River Rhone in France with Algeria and plans for intensive fish farming of the oceans The role of satellites includes telemedicine and there are Swiss plans for further tunnelling through the Alps Project management sections include the formation of a military civilian conservation corps financial and legal issues macro projects in China and a forecast of 21st century macro problems Delivers ideas comments and projects on energy communications transport management human resources and financial and legal issues which macroengineering can contribute to the solution of the Earth s environmental problems Identifies problems in the next century whose solutions call for international policy planning and a more collaborative peaceful and prosperous world order Presents research on a triple helical turbine capable of extracting vast amounts of energy from slow moving water
