Snap-through and Postbuckling Equilibrium Behavior of Circular Cylindrical Shells Under Axial Load Stanford University. Department of Aeronautics and Astronautics, Wayne A. Madsen, Nicholas J. Hoff, 1965 The analysis was begun with an investigation of the effect that a more accurate displacement assumption in conjunction with the exact strain displacement relations has on the postbuckling equilibrium behavior It was hoped that the limiting behavior of wall thickness and wave number parameter would be altered and that the stress coefficient would not tend to zero Particular attention was given to an exact representation of membrane strains because it was known that in the limit as the radius to thickness ratio of the shell approaches infinity the displacements approach the inextensional polyhedral surface While all the strains in the middle surface of this limiting polyhedral shell are zero the Donnell strain displacement relations yield strains amounting to 0.1% if the number of waves around the circumference is 10 The results obtained did not differ significantly from the Donnell strain displacement relations Author

Eric A. Bier,1988 A new technique has been developed for designing precise two and three dimensional shapes rapidly and interactively A synthesis of the best properties of grid based systems constraint networks and drafting has resulted in a new technique called snap dragging To aid precise construction a set of lines circles planes and spheres called alignment objects are constructed by the system at a set of sloped angles and distances specified by the user These alignment objects are constructed at each vertex or edge that the user has declared to be hot of interest Vertices and edges can also be made hot by the system automatically through some heuristics The user can snap the cursor onto these alignment objects onto their points or lines of intersections or onto scene objects using an adjustable gravity mapping Finally the user can translate rotate scale and skew shapes by specifying which operation is desired then grabbing a point on the object and dragging it to a suitable precise location Snap dragging was incorporated into prototype two dimensional illustration system at Xerox PARC which has been used successfully by a community of users since 1986 Study of Horticultural Factors Affecting the Quality of Machine Harvested Green Snap Beans Harvey J.
