Measuring Urban Design Reid Ewing, Otto Clemente, 2013-07-20 What makes strolling down a particular street enjoyable The authors of Measuring Urban Design argue it s not an idle question Inviting streets are the centerpiece of thriving sustainable communities but it can be difficult to pinpoint the precise design elements that make an area appealing This accessible guide removes the mystery providing clear methods to measure urban design In recent years many walking audit instruments have been developed to measure qualities like building height block length and sidewalk width But while easily quantifiable these physical features do not fully capture the experience of walking down a street In contrast this book addresses broad perceptions of street environments It provides operational definitions and measurement protocols of five intangible qualities of urban design specifically imageability visual enclosure human scale transparency and complexity The result is a reliable field survey instrument grounded in constructs from architecture urban design and planning Readers will also find a case study applying the instrument to 588 streets in New York City which shows that it can be used effectively to measure the built environment s impact on social psychological and physical well being Finally readers will find illustrated step by step instructions to use the instrument and a scoring sheet for easy calculation of urban design quality scores For the first time researchers designers planners and lay people have an empirically tested tool to measure those elusive qualities that make us want to take a stroll Urban policymakers and planners as well as students in urban policy design and environmental health will find the tools and methods in Measuring Urban Design especially useful

presenting data planners create stories and narratives that explain various planning issues. Particularly in the era of big data and data mining, there is a stronger demand in planning practice and research to increase capacity for data-driven storytelling. *Basic Quantitative Research Methods for Urban Planners* provides readers with comprehensive knowledge and hands-on techniques for a variety of quantitative research studies, from descriptive statistics to commonly used inferential statistics. It covers statistical methods from chi-square through logistic regression and also quasi-experimental studies. At the same time, the book provides fundamental knowledge about research in general, such as planning data sources and uses, conceptual frameworks, and technical writing. The book presents relatively complex material in the simplest and clearest way possible, and through the use of real-world planning examples, makes the theoretical and abstract content of each chapter as tangible as possible. **Connecting Places, Connecting People** Reena Tiwari, 2017-09-07. What is a better community? How can we reconfigure places and transport networks to create environmentally friendly, economically sound, and socially just communities? How can we meet the challenges of growing pollution, depleting fossil fuels, rising gasoline prices, traffic congestion, traffic fatalities, increased prevalence of obesity, and lack of social inclusion? The era of car-based planning has led to the disconnection of people and place in developed countries and is rapidly doing so in the developing countries of the Global South. The unfolding mega trend in technological innovation while adding new patterns of future living and mobility in the cities will question the relevance of face-to-face connections. What will be the glue that holds

communities together in the future To build better communities and to build better cities we need to reconnect people and places Connecting Places Connecting People offers a new paradigm for place making by reordering urban planning principles from prioritizing movement of vehicles to focusing on places and the people who live in them Numerous case studies including many from developing countries in the Global South illustrate how this can be realized or fallen short of in practical terms Importantly citizens need to be engaged in policy development to connect with each other and with government agencies To measure the connectivity attributes of places and the success of strategies to meet the needs an Audit Tool is offered for a continual quantitative and qualitative evaluation
