Incorporating Sustainability into Procurement Decision Making for Food Supply Chains Helene S. York, 2025-12-19 Bridging the divide between traditional supply chain theory language and practices and the urgent need to incorporate sustainability into supply chain decision making *Incorporating Sustainability into Procurement Decision Making for Food Supply Chains* offers a novel approach to understanding modern food systems and how to use procurement to improve them While existing literature often treats supply chain management and sustainable food systems as separate domains this resource uniquely integrates these evolving fields It directly addresses the challenges faced by supply chain teams who increasingly need to collaborate to forge resilient and ethical food supply chains Drawing on real world experience and current research *Incorporating Sustainability into Procurement Decision Making for Food Supply Chains* illuminates the inner workings of food production and sourcing revealing practical pathways for incorporating environmental social and financial responsibility into procurement decision making Business students will gain a critical understanding of sustainability principles and their practical application in the food sector while sustainability students will learn the strategic thinking and tactical approaches of supply chain management This guidebook empowers both groups to develop a shared understanding and vocabulary fostering the interdisciplinary collaboration essential for achieving organizational sustainability goals and securing a more sustainable future for our food systems as they evolve *Databases and Nutrition, volume II* Alessandra Durazzo, Massimo Lucarini, Igor Pravst, 2023-12-12 *Designing Service Processes to Unlock Value* Joy M. Field, 2024-10-21 The service process design landscape is rapidly evolving with technology enabled innovations allowing

the service provider to create a more personalized service experience and customers to take a more active role in the service process. Designing Service Processes to Unlock Value was written to help you understand the opportunities and challenges for value creation in this dynamic environment. You will learn about approaches for designing all types of service processes as well as the unique challenges of designing knowledge intensive services. And because service performance outcomes are dependent on the knowledge, skills, and abilities that are capabilities of both service providers and customers, the book concludes with strategies for unlocking these capabilities to further boost value co-creation. This edition was being revised when artificial intelligence (AI) and generative AI (e.g., ChatGPT) was being embedded in more and more service processes ranging from knowledge intensive professional services to transactional services we engage with every day. Much like the COVID-19 global pandemic, AI and other developing technologies such as robots, extended reality, digital twins, Internet of Things, and other smart technologies will continue to have profound impacts on how services are designed, delivered, and experienced by service providers and customers as well as the communities and world in which we live. This edition includes new and updated examples of technology enabled innovations that provide unprecedented flexibility in service process design and continue to transform how service providers and customers co-produce services. At the same time, you will see how these and other service innovations can have important and sometimes surprising impacts on the benefit and cost trade-offs and synergies that determine value co-creation.
