*Microgravity and Vision Impairments in Astronauts* Erik Seedhouse, 2015-09-08 Recent missions on board the International Space Station have revealed previously unreported physiological consequences of long duration space flight particularly in eyesight and in this Brief Dr Seedhouse reviews the existing theories on what causes this degeneration and how long it will last Notably 60% of long duration crews have reported subjective degradation in vision a clear indication that further study is necessary before astronauts embark on even longer term space missions Decreased near visual acuity was reported in 46% of ISS Mir crewmembers resulting in a change of up to 2 dioptres in their refractive correction It is possible that ophthalmic changes have been present since the first days of spaceflight but had been attributed to other causes this approach to the issue as well as other hypotheses are all presented in full to give a broad foundation of the existing knowledge on the topic The changes have occurred at various times during a mission with varying degrees of visual degradation Some cases resolved on return to Earth but several crewmembers have not regained pre flight visual acuity indicating the damage may be permanent One explanation of the syndrome has been attributed to hyperopic shift due to aging but onboard analysis techniques including visual acuity assessments retinal imagery and ultrasound examination of the eye has led to the acceptance of a wider syndrome In addition to vision changes studies have reported flattening of the globe swelling of the optic disc papilledema choroidal folds in the retina swelling of the optic nerve sheath and visual field defects It is widely hypothesized that this spectrum of symptoms may be explained by an elevation of intracranial pressure ICP Establishing the provenance of this medical problem monitoring its occurrence and resolving the symptoms for future long term space missions is a key challenge for space medicine With this book readers have an entry point for understanding the full scope of the problem and its possible origins *Yearbook on Space Policy 2015* Cenana Al-Ekabi, Blandina Baranes, Peter Hulsroj, Arne Lahcen, 2017-01-02 The Yearbook on Space Policy edited by the European Space Policy Institute ESPI is the reference publication analysing space policy developments Each year it presents issues and trends in space policy and the space sector as a whole Its scope is global and its perspective is European The Yearbook also links space policy with other policy areas It highlights specific events and issues and provides useful insights data and information on space activities The first part of the Yearbook sets out a comprehensive overview of the economic political technological and institutional trends that have affected space activities The second part of the Yearbook offers a more analytical perspective on the yearly ESPI theme and consists of external contributions written by professionals with diverse backgrounds and areas of expertise The third part of the Yearbook carries forward the character of the Yearbook as an archive of space activities The Yearbook is designed for government decision makers and agencies industry professionals as well as the service sectors researchers and scientists and the interested public **Into Space** Thais Russomano, Lucas Rehnberg, 2018-05-30 Our anatomy and physiology have been completely shaped by Earth's gravity All body systems function in synergy with this unseen force Yet as

we journey further and longer into space our bodies must conform to a new reality wherein gravity is absent or reduced cosmic radiation threatens and our social and familial connections become distant Into Space A Journey of How Humans Adapt and Live in Microgravity gives an overview of some of the physiological anatomical and cellular changes that occur in space and their effects on different body systems such as the cardiovascular and musculoskeletal and touches on cultural and psychosocial aspects of leaving behind family and the safety of Earth It further addresses the complexity of manned space flights showing how interdisciplinary this subject is and discussing the challenges that space physiologists physicians and scientists must face as humans seek to conquer the final frontier

**Microgravity Research in Support of Technologies for the Human Exploration and Development of Space and Planetary Bodies** National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Committee on Microgravity Research, 2000-07-03 The frontier represented by the near solar system confronts humanity with intriguing challenges and opportunities With the inception of the Human Exploration and Development of Space HEDS enterprise in 1995 NASA has acknowledged the opportunities and has accepted the very significant challenges Microgravity Research in Support of Technologies for the Human Exploration and Development of Space and Planetary Bodies was commissioned by NASA to assist it in coordinating the scientific information relevant to anticipating identifying and solving the technical problems that must be addressed throughout the HEDS program over the coming decades This report assesses scientific and related technological issues facing NASA's Human Exploration and Development of Space endeavor looking specifically at mission enabling and enhancing technologies which for development require an improved understanding of fluid and material behavior in a reduced gravity environment

**Microgravity Research and Development** Canadian Space Agency. User Development Program, 1993 Trailblazing Medicine Erik Seedhouse, 2011-05-06 Space medicine has been an important component of the success of human spaceflight and will continue to play a critical role in the future ventures To prepare for the day when astronauts will leave low Earth orbit for long duration exploration missions space medicine experts must develop a thorough understanding of the effects of microgravity on the human body as well as ways of mitigating these effects To gain a complete understanding of the effects of space on the human body and to create the tools and technologies required for successful exploration space medicine will become an increasingly collaborative discipline incorporating the skills of physicians biomedical scientists engineers and mission planners In this work Dr Erik Seedhouse examines the future of space medicine in relation to human space exploration He describes what is necessary to keep a crew alive in space how it will be accomplished in the future and the medical challenges faced by interplanetary astronauts The book is divided into three sections The first looks at space medicine on board the ISS where astronaut stays are often of long duration The second section considers the Exploration Class medical dangers beginning with radiation and the consequent Acute Radiation Syndrome ARS The final section looks at future developments and the importance of telemedicine and how revolutionary

technologies will protect interplanetary astronauts from the space environment The book ends with a description of the kind of hibernation necessary to insure the well being of interplanetary astronauts
