**Ecology and Power in the Age of Empire** Corey Ross, 2017 Ecology and Power in the Age of Empire provides the first wide ranging environmental history of the heyday of European imperialism from the late nineteenth century to the end of the colonial era It focuses on the ecological dimensions of the explosive growth of tropical commodity production global trade and modern resource management strategies that still visibly shape our world today and how they were related to broader social cultural and political developments in Europe s colonies Covering the overseas empires of all the major European powers Corey Ross argues that tropical environments were not merely a stage on which conquest and subjugation took place but were an essential part of the colonial project profoundly shaping the imperial enterprise even as they were shaped by it The story he tells is not only about the complexities of human experience but also about people s relationship with the ecosystems in which they were themselves embedded the soil water plants and animals that were likewise a part of Europe s empire Although it shows that imperial conquest rarely represented the signal ecological trauma that some accounts suggest it nonetheless demonstrates that modern imperialism marked a decisive and largely negative milestone for the natural environment By relating the expansion of modern empire global trade and mass consumption to the momentous ecological shifts that they entailed this book provides a historical perspective on the vital nexus of social political and

**Many Wests** David M. Wrobel, Michael C. Steiner, 1997. What does it mean to live in the West today? Do people tend to identify with states with regions or with the larger West? This book examines the development of regional identity in the American West demonstrating that it is a regionally diverse entity made up of many different wests: Great Plains Southwest Rocky Mountains and more in which American regionalism finds its fullest expression. These fourteen original essays tell how a sense of place emerged among residents of various regions and how a sense of those places was developed by people outside of them. Wrobel and Steiner first offer a compelling overview of the West's regional nature then thirteen other rising or renowned scholars from history American Studies geography and literature tell how regional consciousness formed among inhabitants of particular regions. All of the essays address the larger issue of the centrality of place in determining social and cultural forms and individual and collective identities. Some focus on race and culture as the primary influences on regional consciousness while others emphasize environmental and economic factors or the influence of literature. Some even examine western regionalism in areas that lie beyond the West as it has traditionally been conceived. Each of the contributors believes that where a people live helps determine what they are and they write not only about the many wests within the larger West but also about the constant state of flux in which regionalism exists. Many books speak of the West as a place but few others deal with the West's different places. **Many Wests** presents a vision of the West that reflects both the common heritage and unique character of each major subregion building on the revisionist impulse of the last decade to help redirect New Western History toward an appreciation of regional diversity and integrate scholarship in the regional subfields. It is a book for everyone who lives in studies or loves the West for it confirms that it is home to very different peoples economies histories and regions.

**Colony and Empire** William G. Robbins, 1994. Popular writers and historians alike have perpetuated the powerful myth of the rugged individualist single handedly transforming the American West. In reality William Robbins counters it was the Guggenheims and Goulds the Harrimans and Hearsts and the

Morgans and Mellons who masterminded what the West was to become Remove the romance he shows and a darker West emerges a colonial like region where industrial statesmen aided by eastern U S and European capital manipulated investments in pursuit of private gain while controlling wage earning cowboys and miners Robbins argues that understanding the impact of capitalism on the West from the fur trade era to the present is essential to understanding power influence and change in the region Showing how global capitalism had a more profound impact on the modern West than individual initiative he explores violence and racism along the Texas Mexican border colonial style company towns in Montana and the Northwest contrasting traditions astride the U S Canadian boundary pace setting agribusiness and exploitation of labor in California the growing power of metropolitan centers and dependence of rural areas and the emergence of a sizable federal influence To grasp the essence of the West s dramatic transformation Robbins contends you must look to the mainstays of material relations in the region the perpetually changing character of political and economic culture the inherent instability of resources and the larger constellations of capitalist decision making Consequently he shows shy Western success and failure prosperity and misfortune and expansion and decline were all inseparably linked to the evolution of capitalism at the local regional national and global levels In the tradition of Patricia Nelson Limerick s *Legacy of Conquest* Robbins s study challenges some of our most revered images of the West and invigorates the ongoing debates over its history and meaning for our nation

**Don't Breathe the Air** Scott Hamilton Dewey,2000 With the menace of smog hanging over an increasing number of American cities in the 1960s Clean Air became a rallying cry for a new environmentalism Citizen activists rallied passionately to force state and local governments to address problems that threatened human health and even survival In *Don t Breathe the Air* Scott H Dewey traces the history of air pollution control efforts focusing on the decade of the sixties and describes how local efforts helped create both the modern environmental movement and federal environmental policy Early in the fight against air pollution activists recognized the need for intergovernmental solutions Because air was mobile no single jurisdiction could address problems alone Dewey has chosen three case studies involving different sources of air pollution and different configurations of governments to discover how jurisdictional issues affected environmental organization and the ability to clean up the air First Dewey looks at Los Angeles arguably the birthplace of modern air pollution Because much of the city s air pollution was automobile related Los Angeles had to enlist help from the State of California to regulate both the industry and car owners Relatively speaking Los Angeles was a success story one that set important precedents and illustrated a pattern of local concerns entailing action in a larger arena Dewey then turns to New York City a city plagued by air pollution problems that

involved more than one state and required regional action In its comparative lack of success in dealing with its atmospheric woes compounded by the pollution descending on it from neighboring New Jersey New York was more typical of the overall national pattern than was Los Angeles Finally Dewey examines central Florida where a rural agricultural area suffered from severe industrial air pollution that required a multi jurisdictional solution and a confrontation with influential phosphate manufacturers that all levels of government were long reluctant to tackle Don t Breathe the Air is a comprehensive look at the role of air pollution and citizen activism during the rise of environmentalism in the post World War II United States It clearly lays out the issues and strategies that prepared the way for the federal clean air legislation of the 1970s      **Essays in Economic and Business History** ,1995      **Chasing the Glitter** Richmond L. Clow,2002 Clow Native American studies U of Montana Missoula offers an overview of the gold milling industry in the Black Hills of South Dakota A miner s geology of the region is followed by discussion of the developing industrial processes that led to each major shift in technology from the construction of the first mills to the refinement of the blue refractory ores The book includes abundant b w illustrations primarily of the buildings and landscapes Annotation copyrighted by Book News Inc Portland OR      **After The Boom In Tombstone And Jerome, Arizona** Eric L. Clements,2003-10 Focusing on two Arizona towns that had their origins in mining bonanzas Tombstone and Jerome historian Eric L Clements offers a rare study dissecting the process of bust itself the reasons and manners in which these towns declined as the mining booms ended Tombstone was the site of one of the great silver bonanzas of the nineteenth century a boom that started in the late 1870s and was over by 1890 Jerome s copper deposits were mined for much longer beginning in the 1880s and enduring until the 1930s But when the mining booms ended each town faced its decline in similar ways The process of decline was more complex than superficial histories have indicated and Clements discusses the role of labor unions in trying to stave off collapse the changing demography of decline the nature and expression of social tensions the impact on institutions such as churches and schools and the human responses to continued economic depression But bust involved more than a steady decline into ghost town status Clements discovers the towns remaining residents employed numerous strategies to survive and reduce household expenses In the end both towns reinvented themselves as late twentieth century tourist attractions      **Let Them Eat Yellowcake** Adam B.
