## **Overcoming Barriers To Deployment Of Plug In Electric Vehicles:**

Overcoming Barriers to Deployment of Plug-in Electric Vehicles National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Overcoming Barriers to Electric-Vehicle Deployment, 2015-06-26 In the past few years interest in plug in electric vehicles PEVs has grown. Advances in battery and other technologies new federal standards for carbon dioxide emissions and fuel economy state zero emission vehicle requirements and the current administration's goal of putting millions of alternative fuel vehicles on the road have all highlighted PEVs as a transportation alternative. Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles such as lower operating costs smoother operation and better acceleration the ability to fuel up at home and zero tailpipe emissions when the vehicle operates solely on its battery. There are however barriers to PEV deployment including the vehicle cost the short all electric driving range the long battery charging time uncertainties about battery life the few choices of vehicle models and the need for a charging infrastructure to support PEVs. What should industry do to improve the performance of PEVs and make them more attractive to consumers? At the request of Congress Overcoming Barriers to Deployment of Plug in Electric Vehicles identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers. This report examines the characteristics and capabilities of electric vehicle technologies such as cost performance range safety and durability and assesses how these factors might create barriers to widespread deployment. Overcoming Barriers to Deployment of Plug in Electric Vehicles provides an overview of the current status of PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers. Through consideration of consumer behaviors tax incentives business models incentive programs and infrastructure needs this book studies the state of the industry and makes recommendations to further its development and acceptance.

**Overcoming Barriers to Electric-Vehicle Deployment** National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Overcoming Barriers to Electric-Vehicle Deployment, 2013-06-18 The electric vehicle offers many promises increasing U.S. energy security by reducing petroleum dependence contributing to climate change initiatives by decreasing greenhouse gas GHG emissions stimulating long term economic growth through the development of new technologies and industries and improving public health by improving local air quality. There are however substantial technical social and economic barriers to widespread adoption of electric vehicles including vehicle cost small driving range long charging times and the need for a charging infrastructure. In addition people are unfamiliar with electric vehicles are uncertain about their costs and benefits and have diverse needs that current electric vehicles might not meet. Although a person might derive some personal benefits from ownership the costs of achieving the social benefits such as reduced GHG emissions are borne largely by the people who purchase the vehicles. Given the recognized barriers to electric vehicle adoption Congress asked the Department of

Energy DOE to commission a study by the National Academies to address market barriers that are slowing the purchase of electric vehicles and hindering the deployment of supporting infrastructure As a result of the request the National Research Council NRC a part of the National Academies appointed the Committee on Overcoming Barriers to Electric Vehicle Deployment This committee documented their findings in two reports a short interim report focused on near term options and a final comprehensive report Overcoming Barriers to Electric Vehicle Deployment fulfills the request for the short interim report that addresses specifically the following issues infrastructure needs for electric vehicles barriers to deploying the infrastructure and possible roles of the federal government in overcoming the barriers This report also includes an initial discussion of the pros and cons of the possible roles This interim report does not address the committee's full statement of task and does not offer any recommendations because the committee is still in its early stages of data gathering The committee will continue to gather and review information and conduct analyses through late spring 2014 and will issue its final report in late summer 2014 Overcoming Barriers to Electric Vehicle Deployment focuses on the light duty vehicle sector in the United States and restricts its discussion of electric vehicles to plug in electric vehicles PEVs which include battery electric vehicles BEVs and plug in hybrid electric vehicles PHEVs The common feature of these vehicles is that their batteries are charged by being plugged into the electric grid BEVs differ from PHEVs because they operate solely on electricity stored in a battery that is there is no other power source PHEVs have internal combustion engines that can supplement the electric power train Although this report considers PEVs generally the committee recognizes that there are fundamental differences between PHEVs and BEVs

**Behaviour of Lithium-Ion Batteries in Electric Vehicles** Gianfranco Pistoia, Boryann Liaw, 2018-02-10 This book surveys state of the art research on and developments in lithium ion batteries for hybrid and electric vehicles. It summarizes their features in terms of performance cost service life management charging facilities and safety. Vehicle electrification is now commonly accepted as a means of reducing fossil fuels consumption and air pollution. At present every electric vehicle on the road is powered by a lithium ion battery. Currently batteries based on lithium ion technology are ranked first in terms of performance reliability and safety. Though other systems e.g. metal air lithium sulphur solid state and aluminium ion are now being investigated the lithium ion system is likely to dominate for at least the next decade which is why several manufacturers e.g. Toyota Nissan and Tesla are chiefly focusing on this technology. Providing comprehensive information on lithium ion batteries the book includes contributions by the world's leading experts on Li ion batteries and vehicles

*Policies* Liisa Ecola, 2009 In June 2008 the RAND Corporation convened three workshops on policies for mitigating climate change. These workshops brought together representatives of government, industry, advocacy groups and the research community who hold different perspectives on what the goals of climate change mitigation policy should be and which strategies should be implemented to achieve them. The workshop series was made possible by a generous grant from the McCormick Foundation. Addressing the interconnection of climate change mitigation policy with the key sectors of energy and transportation will be major challenges for the United States in the coming years. The competing interests of these groups sometimes hamper progress on this front. Bringing them together enabled them to share different perspectives and to identify some common points of view on such issues as technological innovation, federal, state and local roles, potential legislative and regulatory solutions, international cooperation and public engagement. These RAND conference proceedings summarize key issues and discussion topics of the three workshops. This document is not intended to be a transcript of the discussions and does not quote any participants by name or affiliation. Rather it organizes the key themes of the workshops by topic in particular pointing out areas of agreement as well as disagreement provided by publisher.
