technologies **Software Engineering, Artificial Intelligence, Networking and Parallel/Distributed Computing**

Roger Lee, 2022-11-18 This book presents scientific results of the 23rd ACIS International Summer Virtual Conference on Software Engineering Artificial Intelligence Networking and Parallel Distributed Computing SNPD2022 Summer which was held on July 4-6, 2022 at Kyoto City Japan. The aim of this conference was to bring together researchers and scientists, businessmen and entrepreneurs, teachers, engineers, computer users and students to discuss the numerous fields of computer science and to share their experiences and exchange new ideas and information in a meaningful way. Research results about all aspects, theory, applications and tools of computer and information science and to discuss the practical challenges encountered along the way and the solutions adopted to solve them. The conference organizers selected the best papers from those papers accepted for presentation at the workshop. The papers were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review. From this second round of review, 15 of the most promising papers are then published in this Springer SCI book and not the conference proceedings. We impatiently await the important contributions that we know these authors will bring to the field of computer and information science.

The Metaverse David Burden, Maggi Savin-Baden, 2024-09-24 The Metaverse: A Critical Introduction provides a clear, concise and well-grounded introduction to the concept of the Metaverse, its history, the technology, the opportunities, the challenges and how it is having an impact on almost every facet of society. The book serves as a stand-alone introduction to the Metaverse and as an introduction to the range of topics that will be covered by the specialist volumes in The Metaverse Series. Key Features: a concise history of the Metaverse idea and related implementations to date; an examination of what the Metaverse actually is; an introduction to the fundamental technologies used in the Metaverse; an overview of how the different uses and aspects of the Metaverse are having an impact on our lives across multiple disciplines and social contexts; a consideration of the opportunities and challenges of the evolving Metaverse; and a sense of how the Metaverse may mature over the coming decades. This book is a primer and Metaverse reader drawing on academic research and practical and commercial experiences and taking inspiration from the science fiction origins and treatments of the Metaverse. The book explores the use of the increasing number of virtual worlds and proto Metaverses which have existed since the late 1990s and includes a critical consideration of recent developments in cryptoworlds and mixed reality. The aim is to provide professional and lay readers, researchers, academics and students with an indispensable guide to what counts as a metaverse, the opportunities and challenges and how the future of the coming Metaverse can best be guided. *Engagement Design* Nelson Zagalo, 2020-03-17 Interactive media designers have been discussing modes to optimize interaction design beyond mere usability. With the arrival of Emotional Design followed by the success of the User Experience (UX) approaches, the discussion continued and augmented Experience has become a complex buzzword which is more about the subject's experience than the product and this is why it's difficult or even impossible to define it in a concise manner. We propose to

move the discussion from Experience towards Engagement to emphasize the design of the relationship between artefacts contexts and users Engagement asks for a more concrete type of experience with specific needs motives skills and competences which can be more clearly worked into the design of artefacts Engagement also differs from other concepts e.g. fun enjoyment happiness or well being and is open enough to grant freedom to designers in creating their personal world views To push this new approach we offer in this book a full model for the design of engagement in interactive media still believing it can be applied beyond that The model is arranged around what we call the three engagement streams

Regulating the Metaverse

Ignas Kalpokas, Julija Kalpokienė, 2023-01-26 The metaverse seems to be on everybody's lips and yet very few people can actually explain what it means or why it is important This book aims to fill the gap from an interdisciplinary perspective informed by law and media and communications studies Going beyond the optimism emanating from technology companies and venture capitalists the authors critically evaluate the antecedents and the building blocks of the metaverse the design and regulatory challenges that need to be solved and commercial opportunities that are yet to be fully realised While the metaverse is poised to open new possibilities and perspectives it will also be a dangerous place one ripe with threats ranging from disinformation to intellectual property theft to sexual harassment Hence the book offers a useful guide to the legal and political governance issues ahead while also contextualising them within the broader domain of governance and regulation of digital technologies
