**The Complete Minolta SLR Camera and Accessory Guide** ,1983      Instructions for the Use of the Minolta Surveillance System S. Sanatani,1974      *Minolta SLR Camera & Accessory Guide* Avalon Communications, Inc,1989

*Novel Method for Measuring the Time of Death on Teeth - Based on Liquid Contents, Reflection Spectra and Colour*  
André Hoffmann,2004-05-25 Knowing about the time of death is often the central key to solving criminal cases The time of death is also relevant in cases of natural death for the family register entry for the insurance system or the succession However the forensic medical estimation of the time of death postmortem interval is still not without limitations especially if it should be precise or if it cannot be done relatively immediately after onset of death With the onset of death various processes begin to set in place that change a corpse and its tissues over the time axis If it were possible to find a process in a certain tissue that would behave precisely like one or better several clockworks and if it were still possible to reset the time to the state before or at the time of death if it would also be possible that these synchronous clocks run again and if it were also possible to run the elapsed time after death in real time on the identical individual to be examined or the identical examination object under comparable conditions simulation the perfect and most precise method for determining the time of death would be born The author of the present work has observed that teeth of dead appear much brighter differently coloured and less translucent and more opaque than teeth of living people and that dental colour changes are based on reversible drying and liquid absorption processes and can be measured with high precision and very differentiated values he revealed phenomena paradoxes dynamics and liquid flow and articulates the dental fingerprint for identification tooth clock tooth memory He measures the loss of liquid in ranges of up to one millionth of a gram in the microgram range as well as the colour and reflection spectra with high precision measuring systems and he sees a fundamental possibility in the use of processes that he has measured and analyzed on drying and liquid absorbing teeth and he is presenting a novel method for the first time Furthermore for the first time he also presents a reference independent approach perhaps the first reference independent analysis or measurement method in the natural sciences based on drying up to the time of the first measurement liquid storage and repeated drying the actual simulation For this reference independent method approach in contrast to his reference dependent method it does not necessarily need reference values i e values that had to be obtained beforehand on other comparable samples see nomogram but only values that were obtained previously on the identical object For the first time the scattering problem was circumvented the way to a high precision method The novel method of analyzing and measuring the time of death seems to have a number of advantages objectifying measurement instead of subjective estimations of stages several independent values such as L a b C h M spectral values instead of just one numerical value temperature in degrees in the case of the body cooling method reversibility instead of irreversibility of the processes and thus after sufficient liquid storage repeatability of the post mortem conditions and consequently the post mortem interval

up to the first measurement in the context of a simulation under comparable conditions on the identical object and thus avoidance of the scattering problem avoidance of intra and inter individual differences on both sides of the autopsy table for the estimating and for the estimated individual time of death measurement on site or high precision measurements with high precision positioning systems instead of measurement with thermometers in the author's vision comfortable measurements of various samples independently of one another within an automatic analyzer simulating ambient conditions in the laboratory

instead A breakthrough **Popular Photography**, 1983-07 **Systematic Research and Analysis of the Tooth Colour**

André Hoffmann, 2005-10-31 Andr Hoffmann innovator researcher and developer pioneer in the field of optical technologies photonics systematically researched the tooth colour and its origin with highest precision see publication in 2000 This book shows an excerpt of this systematic original research at human teeth and dental shade guides with high precision measuring systems and high precision positioning system in vitro Due to his basic scientific research he was able to quantify and isolate manifold factors influencing the colour of teeth These include for example the light or measuring light and the type of light illuminant and illumination and colour temperature the optical beam path of the light or the measuring geometry the observation angle 2 10 the size of the measuring surface and measuring opening the gloss the liquid content with scientific evidence of the relationship between liquid content and tooth colour effect of drying moisture and rehydration the correlation between the liquid content and the gloss effect the subjectivity of visual subjective shade matching crown curvature type of system spectrophotometer tristimulus colorimeter measuring mode contact or non contact system object relation positioning repeatability or reproducibility lens shift displacement between sample and measuring surface and further intra and interindividual factors In addition subjective visual determinations and objectified measurements were examined in subjective objective comparisons using colour coordinates comparisons All these influencing factors are investigated on moist drying drier various specific dehydration and rehydration states and dry teeth based on the brightness L on colour measurement values such as a b CIELAB C h CIELCH E on the metamerism index on spectral values and curves tabs of dental shade guides and on tooth colour spaces As part of this exploration phenomena e g changes and breaks in behaviour as well as highly individual developments in colour values paradoxes between the values of subjective determination using shade guides and the values of objective measurements were identified and insights into the very complex colour dynamics through dehydration and rehydration were shown up to more than 8 days The development of the individual colour measurement values was based on the liquid flow through the tooth and its tissues in particular during drying and rehydration and gave information about dynamics and the temporal extent of these processes On the basis of this data Hoffmann had developed several methods for research and practice suggestions for feasible innovations such as monitoring of dental treatment to protect against pulp damage based on drying and reconstructing the colour of naturally moist teeth on those that have already dried the identification of the living and the dead human and animals via the dental fingerprint and a

novel method of measuring the time of death for forensic medicine He also described a time limit of drying up to which relatively natural suitable colour values and shade matching results can be obtained and after which no colour determination should be carried out and he established the rehydration time after the end of the drying or dental treatment which must be waited in order to regain a natural tooth colour and to get correct values and results again His findings also show that teeth are able to store information on for example the condition liquid content colour values and the time within the drying and liquid re absorption chronology The author articulates a dental chronometer tooth clock dental data store tooth data store and a dental memory tooth memory and believes that significant progress in this field may include and could be achieved via a neural network for colour measurement apparatus A book for anyone interested in the natural sciences **Konica Minolta**,2003 **Popular Photography**,1983-01 **Popular Photography**,1991 **Popular Photography**,1983-02 **Popular Photography**,1992-03 **Popular Photography**,1982-12 *Guide to Camera Equipment* Mike Stensvold,1981 **Konica Minolta**,2005 **Popular Photography**,1992-02 **Popular Photography**,1999-09 **Controls in Black and White Photography** Richard Joseph Henry,1986 **The EBay Price Guide** Julia L.
