Renal Pathophysiology Helmut G. Rennke, Bradley M. Denker, 2007 This text offers second year medical students a case based approach to learning mechanisms of renal disease. Each chapter covers a disease and begins with a patient case followed by discussion of the pathophysiology of the disease. Issues of differential diagnosis and therapy are linked to pathophysiologic mechanisms. Short questions interspersed in the text require students to apply their knowledge and detailed answers to the questions are given. The Second Edition incorporates the latest findings regarding mechanisms of renal disease. This edition also has a two color art program and a fresh new design that features cases, questions and other pedagogical elements prominently.

Community Nutrition Gail C. Frank-Spohrer, Gail C. Frank, 1996 This book is divided into three sections each covering a certain level of understanding about disease progression and health care intervention. The first section addresses nutrition in U.S. communities and lays the groundwork for primary, secondary and tertiary prevention. The second section focuses on primary prevention of disease by first addressing food-borne illness as a recurrent concern in a community and then discussing nutritional concerns of each age-specific group. The third section broadens the base of understanding of specific chronic diseases and the role of eating behavior in disease development. Written to fill the need for an intensive one-semester course in advanced community nutrition or nutritional epidemiology.
