1. The first step in the process of identifying a problem is to define the problem clearly. This involves identifying the symptoms, the scope of the problem, and the impact it is having on the organization.

2. Once the problem has been defined, the next step is to gather information. This involves collecting data, conducting research, and consulting with experts. The goal is to understand the root cause of the problem and to identify potential solutions.

3. The third step is to analyze the information. This involves evaluating the data, identifying patterns, and determining the most likely cause of the problem. It also involves considering the potential consequences of different solutions.

4. The fourth step is to develop a plan. This involves identifying the specific actions that need to be taken to solve the problem, determining the resources that will be needed, and establishing a timeline for implementation.

5. The final step is to implement the plan. This involves putting the plan into action, monitoring progress, and making adjustments as needed. It also involves communicating the plan to all relevant stakeholders and ensuring that they are committed to its implementation.

Structured and Object-oriented Problem Solving Using C++ Andrew C. Staugaard,2002 Welcome to the third edition of my C text The highly successful first edition was one of the first textbooks available for teaching C in the first programming course The text was introduced at the 1994 ACM Conference in Phoenix when many were arguing the virtues of teaching C and OOP versus

Pascal and structured programming in the first programming course I argued at the time and still argue that students need to be taught problem solving early on using both the structured and object oriented paradigms and because of its hybrid nature C is the only language suited to learning both of these paradigms Since then many institutions have made the switch from Pascal to C for just this reason as well as the intense industry support for C language As a result this third edition continues to provide an introduction to both structured and object oriented problem solving techniques using the C language Of course many improvements have been made based on using the text in numerous classrooms all over the world since 1994 As with earlier editions the text starts from the beginning assuming no previous knowledge of C or any other programming language This text is appropriate for any introductory programming CS1 course using the C language as well as experienced programmers wanting an introduction to structured and object oriented problem solving techniques using the C language
