Davidson, Sang Lyul Min, 2003-06-29 This volume contains the proceedings of the ACM SIGPLAN Workshop on Languages, Compilers and Tools for Embedded Systems (LCTES 2000) held June 18, 2000 in Vancouver, Canada. Embedded systems have developed considerably in the past decade and we expect this technology to become even more important in computer science and engineering in the new millennium. Interest in the workshop has been confirmed by the submission of papers from all over the world. There were 43 submissions representing more than 14 countries. Each submitted paper was reviewed by at least three members of the program committee. The expert opinions of many outside reviewers were invaluable in making the selections and ensuring the high quality of the program for which we express our sincere gratitude. The final program features one invited talk, twelve presentations and five poster presentations which reflect recent advances in formal systems, compilers, tools and hardware for embedded systems. We owe a great deal of thanks to the authors, reviewers and the members of the program committee for making the workshop a success. Special thanks to Jim Larus, the General Chair of PLDI 2000 and Julie Goetz of ACM for all their help and support. Thanks should also be given to Sung Soo Lim at Seoul National University for his help in coordinating the paper submission and review process. We also thank Professor Gaetano Borriello of the University of Washington for his invited talk on Chinook, a hardware/software co-synthesis CAD tool for embedded systems.

, 1974 **Real Time Digital Control Applications** A. Alonso-Concheiro, 2014-05-23 Real Time Digital Control Applications is a compilation of papers presented at the Symposium on Real Time Digital Control Applications sponsored by the International Federation of Automatic Control (IFAC) and the International Federation for Information Processing (IFIP) held in Guadalajara, Mexico. The event is organized to provide developing countries with the opportunity to gain insights from the sharing of ideas and experiences of experts from around the world to the rapid growth and development of applications of real time digital control systems which is considered as the basis of industrial revolution. The book presents and discusses the various scientific, industrial and technical applications of real time digital control systems. Applications in power generation, water, metal processing, cement, food and manufacturing industries are shown. The text also covers applications in robotics, biomedicine, monitoring and failure detection, fuel optimization and heat control, adaptive process control, modeling and computer software. Industrial engineers, scientists, economists, computer scientists, robotics experts, planners and technicians will find this book invaluable.
