have a preparation that includes the rudiments of algebra geometry trigonometry and knowledge of some of the elementary functions such as logarithms and exponentials The idea behind the writing of these handouts is to provide students with a tool that allows them to approach the main concepts and methods of the analysis of the functions of a variable in a simple and intuitive way For this we make use and reference whenever it may prove useful to Maple or to other programs such as Mathematica Derive etc which allow formal numerical and graphic manipulation Each chapter of the handouts is meant to be read from top to bottom The examples in particular tend to illustrate ideas to make them concrete to provide elements for new ideas rather than as examples of exercises Thus even the graphics are not text decorations but an important part in the growth of geometric intuition The ability to visualize problems is just as important as that of knowing how to theoretically set them Finally mathematics is not a natural language but it has its own vocabulary its grammar and its syntax Learning to use this language correctly is essential for understanding setting up and solving the problems that Analysis offers to the student
