Stopping

Climate Change Paul Ekins, 2023-11-30 Written by one of the leading experts in the field, Paul Ekins' *Stopping Climate Change* provides a comprehensive overview of what is required to achieve real zero carbon dioxide emissions by 2050 and negative emissions thereafter, which is the only way to stop human induced climate change. This will require innovation in socio-technical systems and in human behaviour on an unprecedented scale. *Stopping Climate Change* describes the changes required to meet this goal in technologies, social institutions, and individual activities. Paul Ekins examines in detail issues around the supply and demand of energy and materials and the efficiency of their use. It also analyses greenhouse gas removal technologies, offsetting and geoengineering, and plots the reduction of the non-CO₂ greenhouse gas emitting activities. Having set out the changes required, Ekins considers the economic implications in terms of both the innovation and investments that are necessary to bring them about and the effects that these are likely to have on national economies. The evidence presented points clearly to the economic impacts of decarbonisation being positive for the majority of countries and for the world as a whole, even before considering the benefits of avoided climate change. When the health benefits of stopping the burning of fossil fuels are factored in, the global net benefits of decarbonisation are unequivocal. Drawing on examples

from the UK and Europe but with wider relevance at a global scale Stopping Climate Change clearly shows how determined policy action at different levels could stop climate change It will be of great interest to students scholars and policymakers researching and working in the field of climate change and energy policy **Human Mobility, Artificial Intelligence and Climate Change** George A. Giannopoulos,Yidong Li,2025-11-20 This monograph offers a comprehensive discussion on the current challenges for developing future sustainable and resilient transport systems It specifically focuses on the effects of two major shaping factors namely climate change and the increased use of technologies in particular artificial intelligence It analyses issues and the relevant strategies adopted by different governments for facing social and environmental issues while planning the intelligent and decarbonized mobility of the future Topics discussed in this book include the use of artificial intelligence and big data in transportation and mobility strategies for decarbonizing transport the role of automated transport in future mobility resilient transport infrastructures and other important related issues Besides addressing researchers and professionals active in this field this book will also offer an introduction on achievements and future challenges in mobility for newcomers

The Energy Disruption Triangle David C. Fessler, 2019-01-22 A real world guide for adapting to the new energy era
The Energy Disruption Triangle is a treatise on the energy revolution's real world impacts and a handbook for anyone looking to weather the storm. Three major technologies are already changing the energy paradigm: solar energy, electric vehicles, and energy storage. As technology continues to evolve and become more accessible to the masses, the nation's energy habits will experience a dramatic upheaval. This book provides actionable guidance to help you adapt. We are already in the beginning stages of this black swan event, and most people don't know what's coming, but it will come much sooner and much faster than anyone thinks. This book reveals the revolution happening right before our eyes and shows you how to thrive in this new era. Learn how our energy supplies and usage are changing. Understand why energy storage matters and how the technology is evolving. Explore the history and future of groundbreaking energy technologies. Delve into the disruption of the U.S. energy supply and the possibility of energy independence. Rapidly advancing battery technology is boosting energy storage for homeowners, utilities, and electric vehicle manufacturers, stranding fossil fuels in the ground due to the high price of extraction relative to cost-effective sources such as solar and wind. Traditional energy sources are being phased out, and our nation has come to a fork in the road: uphold the status quo and allow our energy supply to be disrupted or adapt and advance to a state of total energy independence. The Energy Disruption Triangle explores the state of U.S. energy from source to consumer and provides insight into the three sectors that are changing the world.
