**Ultrafiltration/Microfiltration Membranes for Removal of Nitrocellulose (NC) Fines from Wastewater** Byung Joo Kim,Mark M. Clark,Yonghun Lee,1997 Nitrocellulose NC is a basic constituent for military gun propellants NC wastewater is a byproduct of the NC manufacturing process Crossflow microfiltration ultrafiltration MF UF may recover NC fines and allow the wastewater to be recycled This bench scale crossflow membrane filtration system was constructed to test the application of MF UF technology to NC wastewater This study was conducted in two phases The results of Phase I were used to select a candidate membrane In Phase II a pilot scale crossflow membrane filtration system was constructed to 1 investigate the concentration polarization and fouling mechanism caused by NC fines during crossflow filtration of NC wastewater 2 explore flux decline behavior of NC wastewater streams with various membranes and 3 study the effects of operating parameters on flux decline behavior This study found that 1 UF membranes have a lower flux decline rate and a higher flux recovery than MF membranes but UF membranes have a relatively low permeate production rate compared to MF membranes 2 A critical membrane pore size of about 0.1 micron exists at which point the worst flux performance occurs 3 The cellulose based hydrophilic membranes have the best flux performance      Microfiltration and Ultrafiltration Membrane Systems American

Water Works Association,2019      **Micro- and Ultrafiltration Performance Specifications Based on Microbial Removal** Joseph G. Jacangelo,2006 The research reports details the assessments used to develop a systematic performance testing protocol and specification for microfiltration MF and ultrafiltration UF membranes with respect to removal of viral and submicron bacterial pathogens It includes a peer reviewed protocol and performance specification based on data developed in the bench pilot and full scale testing for this project Key issues included the use of microbial surrogates for enteric viruses and the impact of membrane characteristics membrane operation and water quality variables on microbial removal      *Impact of Operating Parameters on Flux Decline in Microfiltration and Ultrafiltration* Anais A. Makardij,2002

**Fouling Characteristics of Ceramic Microfiltration and Ultrafiltration Membranes During Surface Water Treatment** SeungJin Lee,2013 Ceramic membrane processes are a rapidly emerging technology for water treatment yet virtually no information on the performance and fouling mechanisms is available to the industry Ceramic microfiltration of model feed solutions and a synthetic river water was examined and a systematic comparison with polymeric counterpart was

performed The results suggested that the models which have been applied to polymeric membranes agreed well with the ceramic membrane filtration data The fouling was characterized by the initial pore blocking mechanism and transition to the cake filtration mechanism at a later phase Cake resistance was dominant and readily removable by physical cleaning The effects of solution chemistry including ionic strength divalent ion concentration and pH on the flux behavior were comparatively evaluated for ceramic and polymeric ultrafiltration of synthetic water containing model natural organic matter Experimental evaluations further included resistance in series model analysis organic matter fouling visualization using quantum dots batch adsorption test and contact angle measurement and provided a quantitative a quantitative comparison of fouling characteristics between ceramic and polymeric membranes The results collectively suggested that the effects of solution chemistry on the fouling behavior with ceramic membranes were mostly similar with polymeric membranes in terms of trends while the extents varied depending on water quality parameters Less fouling tendency and better cleaning efficiency were observed with the ceramic membranes which was a promising finding for ceramic membrane application to surface water treatment The study further examined a coagulation ceramic membrane process as a robust option for surface water treatment The performance of the hybrid system was evaluated using selected surface waters by varying coagulation conditions and types of coagulants Results suggested that ceramic membranes experienced relatively less fouling and had better cleaning efficiency than polymeric counterpart The results of this study provide critical information to guide the industry practitioners consultants and regulatory agents considering early adoption of this new technology as well as fundamental knowledge upon which further in depth studies can be built

Integrated and Hybrid Process Technology for Water and Wastewater Treatment Abdul Wahab Mohammad, Wei Lun Ang, 2021-08-25 Tackling the issue of water and wastewater treatment nowadays requires novel approaches to ensure that sustainable development can be achieved Water and wastewater treatment should not be seen only as an end of pipe solution but instead the approach should be more holistic and lead to a more sustainable process This requires the integration of various methods processes to obtain the most optimized design Integrated and Hybrid Process Technology for Water and Wastewater Treatment discusses the state of the art development in integrated and hybrid treatment processes and their applications to the treatment of a vast variety of water and wastewater sources The approaches taken in this book are categorized as i resources recovery and consumption ii optimal performance iii physical and environmental footprints iv zero liquid discharge concept and are v regulation driven Through these categories readers will see how such an approach could benefit the water and wastewater industry Each chapter discusses challenges and prospects of an integrated treatment process in achieving sustainable development This book serves as a platform to provide ideas and to bridge the gap between laboratory scale research and practical industry application Includes comprehensive coverage on integrated and hybrid technology for water and wastewater treatment Takes a new approach in looking at how water and wastewater treatment contributes to sustainable development Provides
