

Excel 2013 Data Analysis With Tables

Using Tables for Tables?

Most data can take the form of well-organized lists, conveniently arranged combinations of text and numbers, instead of the usual form of "spreadsheets." These are known as List Range. When List Range can be sorted, filtered, and analyzed, they can also be referred to as List Tables and are referred to as Tables after conversion.

Excel Tables

Creating an Excel Table

Create Tables to store, format, evaluate formulas, and analyze the data with PivotTables or Power Pivot. Excel is well-suited for tables, but you can also use lists instead of tables.

1. Select the cells to convert.
2. Choose TABLE, New Table.
3. Modify the table and headers, select both table header cells, in this example, a range of cells including the first row of each table header, then **OK**.
4. The table now has headers, and will retain the headings "Column 1", "Column 2", etc. The table is "Sorted" because each column has its own sort order, and "Filtered" because the table is filtered.
5. When placing information to the left or right of the table, as this may be relative across the table it is filtered, the new cells are on their own in a shared worksheet. To ensure a filter, choose the worksheet from the drop-down list, then, **OK**.

Advantages of Creating a Table over an Excel List

1. It's easy to view the rows or columns in the list independently.
2. By using columns, choose **ROWS**, then **DATA/ROWS** under **ROWS**, **ROWS** under **COLUMNS** **ROWS**.
3. The fields in rows or columns, choose **ROWS**, then **DATA/ROWS** under **COLUMNS**.

Formatting Only One Table

1. Click on the table and choose **FORMAT**, **FORMAT**.
2. Choose **Font**, then **Font**, **Font**, **Font**, **Font**, **Font**, **Font**.

Formatting One Table in a Table

The easiest way to maintain consistent styles.

1. Select the List Range or Table.
2. Choose **Font**, then **FORMAT**, **FORMAT**.
3. Select the **Font** option to be consistent. Data needs to be copied or selected, and then the **Font** option will be applied to the selected range. For example, all rows will be consistent for a specific column because it is a combination of identical address references even if different numbers are present.

For other ways to maintain consistent styles, see **Formatting Multiple Tables in Another Range**.

Using Tables Specializes in Formulas

Excel tables can be used in formulas using Table specific instead of typical mathematical references. For example, **=\$D\$10\$** indicates the value of the cell in the tenth column of the second row in the table in the **DATA** table.

As references can include the table under analysis and other references, special form can be used instead. Such as **=\$D\$10\$** to represent the tenth column such as **=\$D\$10\$** for all data in the **DATA** table. To indicate column range form, use column references, such as **=\$C\$10:\$C\$10\$** to represent the tenth column, **=\$C\$10:\$C\$10\$** to the tenth column.

For example, **=\$C\$10:\$C\$10\$** is the tenth column of the **DATA** table, **=\$C\$10:\$C\$10\$** is the tenth column of the **DATA** table.

Converting a Table to a List Range

Some features, such as subtotal and charted relationships, do not work with List Tables. To use these you must convert the List Range back to a List Range.

1. **DATA** in the ribbon.
2. Choose TABLE TO LIST, **OK**.
3. **DATA**

Using a List Range for Tables

Tables, Subtotals, and PivotTables can be used with List Range. To use these, you must convert the List Range back to a List Range.

- One range per sheet.
- Separate the range from other data with a blank row or column.
- The range must have identical row or column patterns.
- Sort unique columns headings in the first row.

PivotTables

Use PivotTables to analyze large amounts of data by grouping and having each the columns of a Table or Range, then selecting grid and then arranging the grouped data in the relationships.

Creating a PivotTable® from a Worksheet Range
