Korolenko, 2009-04-30 This volume contains the papers presented at the International Workshop Information Fusion and Geographic Information Systems IF GIS 09 held in St Petersburg Russia in May 2009. The workshop was organized by the St Petersburg Institute for Informatics and Automation of the Russian Academy of Sciences SPIIRAS. The workshop continues a series organised biannually and attracts academics and industrials from a wide range of disciplines including computer science, geography, statistics, mathematics, hydrography, geomorphology and environmental sciences. The objective of this workshop is to provide a forum for innovative research oriented towards Geographic Information Science and technologies and Corporate Information Systems whose close association highlight novel theoretical and practical challenges. The papers selected by the International Program Committee cover a wide range of innovative areas including ontological and semantic approaches for the representation of geographical data, geographical data monitoring, situation management and forecast to emerging applications oriented to the maritime environment, disaster management and security threats. While traditional topics of GIS conferences are well represented and still being advanced, several new domains appear and stress the need for the development of versatile monitoring systems and decision making systems. While GIS already have a de facto standard for geographical monitoring and analysis, the papers accepted in this volume also illustrate several novel directions of application whose objective is more closely oriented to process modeling and decision making and where the nature of the objects represented is revisited using ontological and semantic approaches
