## Microwave Optics.

**CAUTION:** The output power of the microwave transmitter is well below standard safety levels. Nevertheless, do not look directly into the microwave horn at close range when the transmitter is on.

The arms of the goniometer slide through the holes in the base of the component holders, the magnetic strip on the bottom of the arms grips the base of the carriage. The microwave transmitter and receiver mount onto the arms in the same manner. It is usually advantageous to attach the transmitter to the fixed arm of the goniometer and the receiver to the rotating arm. This allows a fixed relationship to be maintained between the microwave beam and the components mounted on the fixed arm. The components may be, reflectors, slits or polarizers.

Here is a holder attached to one of the arms.

### What you Need to Know.

Here's a quick survey of the equipment you will be using. You have a Gunn diode Transmitter and microwave receiver.

**Gunn Diode Transmitter**

**Microwave Receiver**

These can be mounted on the goniometer arms. One arm will rotate, it is best to attach the receiver to this arm.
