Communications Middleware for Tactical Environments: Observations, Experiences, and Lessons Learned, 2009 Tactical networking environments present significant challenges that must be overcome in order to effectively support net centric warfare The wireless and ad hoc nature of these networks implies unreliable connectivity limited bandwidth and variable latency Past and current research has focused on physical and data link layers routing protocols transport protocols and cross layer aspects However significant work is needed at the upper layers to better support application requirements In our experience achieving effective communications in tactical environments requires taking into account application requirements and communication patterns designing a rich interface between the application and communication layers and realizing a communications middleware specifically adapted to tactical networks In this article we report on our observations from several tactical networking experiments and demonstrations and the lessons learned from deployment of the Mockets middleware to support tactical communications We hope these experiences are useful to others designing and implementing applications and systems for tactical environments

Controller and Communications Middleware Survey and Evaluation, 1998 There is a need for a standard core architecture to reduce the costs of developing and maintaining ground control systems for different satellites This report documents a survey and evaluation of next generation computing technology trends relevant to the need In addition to the advent of the Internet there are two Important on going evolutions impacting the area the migration to distributed client server computing and the paradigm shift to object oriented OO programming New application software is being developed based on a distributed object model and clients are tied to servers by software called middleware Available commercial off the shelf COTS controller and communication middleware are evaluated for their applicability to satellite ground stations and for distributed processing distributed database access and distributed systems management Available products and vendors are listed Low cost satellite ground station application software with the flexibility to adapt as requirements change can be built using COTS available middleware Although most middleware frees the application developer from the need for network programming it nevertheless requires an experienced implementation staff for the selection of an integrated set of middleware products

Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt, 2017-08-08 This book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell Germany It starts with a step by step introduction to developing stable and safe scientific software to run successful software projects The use of software toolboxes is another essential aspect that leads to the application of generative programming An example is a generative network middleware that simplifies communication One of the book's main focuses is on explaining a potential strategy

involving autonomous production cells for space geodetic techniques The complete software design of a satellite laser ranging system is taken as an example Such automated systems are then combined for global interaction using secure communication tunnels for remote access The network of radio telescopes is used as a reference Combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4.0
