This revised edition also includes new chapters covering alternative therapies and responding to emergencies. Case studies, critical thinking questions and exercises developing care plans encourage students to think beyond the classroom. Full color illustrations cross referencing between chapters and suggested resources are among the many features that will appeal to students. Diagnostic tests are listed alphabetically in chart form making important information about the test, normal values and nursing responsibilities easy to find. Chapter end critical thinking questions help students apply chapter content. Web Flash box suggests Internet sites students can consult for additional information. Text includes a glossary, a list of abbreviations and acronyms, a listing of the latest NANDA nursing diagnoses and Standard Precautions.

Medical-surgical Nursing Lois White, 1998 This text has a unique focus on all aspects of medical surgical nursing beginning with a section that focuses on ethics, diversity and communication before moving on to a comprehensive study of the medical surgical aspects of client care. Students are challenged to think critically beginning with chapter one and continuing throughout the text as they work through client care problems. Medical surgical concepts are presented in a body systems approach using the nursing process to cement essential knowledge and enhance clinical application. Each chapter includes a case study designed to challenge the student to think critically about a disorder and systematically develop a related nursing care plan. This increases the student's understanding of the disorder and improves critical thinking for clinical application.
