Relevant Query Answering over Streaming and Distributed Data Shima Zahmatkesh, Emanuele Della Valle, 2020-01-21 This book examines the problem of relevant query answering over the Web and provides a comprehensive overview of relevant query answering over streaming and distributed data. In recent years Web applications that combine highly dynamic data streams with data distributed over the Web to provide relevant answers have attracted increasing attention. Answering in a timely fashion, i.e. reactively, is one of the most important performance indicators especially when the distributed data is evolving. The book proposes a solution that retains a local replica of the distributed data and offers various maintenance policies to refresh the replica over time. A limited refresh budget guarantees the reactivity of the system. Focusing on stream processing and Semantic Web, it appeals to scientists and graduate students in the field.

Elements of Programming Interviews Adnan Aziz, Tsung-Hsien Lee, Amit Prakash, 2012 The core of EPI is a collection of over 300 problems with detailed solutions including 100 figures, 250 tested programs and 150 variants. The problems are representative of questions asked at the leading software companies. The book begins with a summary of the nontechnical aspects of interviewing such as common mistakes, strategies for a great interview, perspectives from the other side of the table, tips on negotiating the best offer and a guide to the best ways to use EPI. The technical core of EPI is a sequence of chapters on basic and advanced data structures, searching, sorting, broad algorithmic principles, concurrency, and system design. Each chapter consists of a brief review followed by a broad and thought-provoking series of problems. We include a summary of data structure, algorithm and problem solving patterns.

Interactive Multimedia and Next Generation Networks Vincent Roca, Franck Rousseau, 2004-10-26 Interactive Distributed Multimedia Systems (IDMS) and Protocols for Multimedia Systems (PROMS) have been two successful series of international events bringing together researchers, developers and practitioners from academia and industry in all areas of multimedia systems. These two workshops successfully merged in 2003 and now constitute the MIPS workshop. After the outstanding MIPS 2003 workshop organized in Naples, Italy, by Giorgio Ventre and Roberto Canonico from the University of Naples Federico II, MIPS 2004 moved to Grenoble, France. Following the great tradition, MIPS 2004 was intended to contribute to scientific, strategic and practical advances in the area of distributed multimedia applications, protocols and intelligent management tools, with emphasis on their provision over novel network architectures. This is undoubtedly a rather broad area which is confirmed by the large range of topics that were addressed in the submitted and accepted papers. This year the Call for Papers attracted 74 submissions, essentially from Europe and Asia, plus a few contributions from North America, the Middle East and Africa, for a total of 20 countries. We would like to express our warmest gratitude to all the authors without whom organizing this event would have been impossible. Thanks to the outstanding work of the Program Committee and the additional reviewers, 20 full-sized papers and 5 additional short papers were finally accepted, which was not an easy task. Like MIPS 2003, MIPS 2004 remained a highly selective event: 33%

acceptance ratio including the short papers which is the best warrant of a good program quality
