Petrel Software Manual 2015:

Quantifying Uncertainty in Subsurface Systems Céline Scheidt, Lewis Li, Jef Caers, 2018-06-19 Under the Earth's surface is a rich array of geological resources many with potential use to humankind. However extracting and harnessing them comes with enormous uncertainties, high costs and considerable risks. The valuation of subsurface resources involves assessing discordant factors to produce a decision model that is functional and sustainable. This volume provides real world examples relating to oilfields, geothermal systems, contaminated sites and aquifer recharge. Volume highlights include: A multi-disciplinary treatment of uncertainty quantification. Case studies with actual data that will appeal to methodology developers. A Bayesian evidential learning framework that reduces computation and modeling time. **Quantifying Uncertainty in Subsurface Systems** is a multidisciplinary volume that brings together five major fields: information science, decision science, geosciences, data science and computer science. It will appeal to both students and practitioners and be a valuable resource for geoscientists, engineers and applied mathematicians. Advances in Remote Sensing Technology and the Three Poles Manish Pandey, Prem C. Pandey, Yogesh Ray, Aman Arora, Shridhar D. Jawak, Uma K. Shukla, 2022-12-12 **ADVANCES IN REMOTE SENSING TECHNOLOGY AND THE THREE POLES** Covers recent advances in remote sensing technology applied to the Three Poles, a concept encompassing the Arctic, Antarctica and the Himalayas. **Advances in Remote Sensing Technology and the Three Poles** is a multidisciplinary approach studying the lithosphere, hydrosphere, encompassing both limnosphere and oceanosphere, atmosphere, biosphere and anthroposphere of the Arctic, the Antarctic and the Himalayas. The drastic effects of climate change on polar environments bring to the fore the often subtle links between climate change and processes in the hydrosphere, biosphere and lithosphere while unanswered questions of the polar regions will help plan and formulate future research projects. Sample topics covered in the work include: Terrestrial net primary production of the Arctic and modeling of Arctic landform evolution. Glaciers and glacial environments including a geological, geophysical and geospatial survey of Himalayan glaciers. Sea ice dynamics in the Antarctic region under a changing climate. The Quaternary geology and geomorphology of Antarctica. Continuous satellite missions, data availability and the nature of future satellite missions including scientific data sharing policies in different countries. Software tools, models and remote sensing technology for investigating polar and other environments. For postgraduates and researchers working in remote sensing, photogrammetry and landscape evolution modeling. **Advances in Remote Sensing Technology and the Three Poles** is a crucial resource for understanding current technological capabilities in the field along with the latest scientific research that has been conducted in polar areas.

Subaqueous Mass Movements and Their Consequences A. Georgiopoulou, L.A. Amy, S. Benetti, J.D. Chaytor, M.A. Clare, D. Gamboa, P.D.W. Haughton, J. Moernaut, J.J. Mountjoy, 2020-07-08 This GSL volume focuses on underwater or subaqueous landslides with the overarching goal of understanding how they affect society and the

environment The new research presented here is the result of significant advances made over recent years in directly monitoring submarine landslides in standardising global datasets for quantitative analysis constructing a global database and leading international research projects This volume demonstrates the breadth of investigation taking place into subaqueous landslides and shows that while events like the recent ones in the Indonesian archipelago can be devastating they are at the smaller end of what the Earth has experienced in the past Understanding the spectrum of subaqueous landslide processes and therefore the potential societal impact requires research across all spatial and temporal scales This volume delivers a compilation of state of the art papers covering topics from regional landslide databases to advanced techniques for in situ measurements to numerical modelling of processes and hazards

Mesozoic Resource Potential in the Southern Permian Basin B. Kilhams,P.A. Kukla,S. Mazur,T. McKie,H.F. Mijnlief,K. van Ojik,2018-08-31 The Southern Permian Basin as its name suggests is a historical heartland for hydrocarbon production from the Palaeozoic Rotliegend interval However in this mature basin the Mesozoic presents further possibilities to offer resource security to NW Europe Such opportunities include increasing efficiency in the production of discovered hydrocarbons exploration for further hydrocarbons both conventional and unconventional and efficient exploration for and production of geothermal energy All these potential resources require a grounding in technically sound geoscience via traditional scientific observation and the application of new technologies to unlock their value The main aim of this volume is to bring together the work of academics and industry workers to consider cross border geoscience including contributions on Poland Germany The Netherlands the United Kingdom and adjacent areas The work presented intends to contribute to the development and discovery of further Mesozoic energy resources across the basin

Wildlife and Wind Farms - Conflicts and Solutions Martin Perrow,2019-08-01 Wind farms are an essential component of global renewable energy policy and the action to limit the effects of climate change There is however considerable concern over the impacts of wind farms on wildlife leading to a wide range of research and monitoring studies a growing body of literature and several international conferences on the topic This unique multi volume work provides a comprehensive overview of the interactions between wind farms and wildlife Volume 4 provides a state of the science guide to monitoring and mitigation to minimise or even eliminate impacts on wildlife from offshore wind farms The survey and monitoring section includes detailed chapters on fish and invertebrate communities marine mammals and seabirds and a chapter dedicated to the use of tracking technology applied to birds The section continues with a chapter on collision risk and population modelling that underpins much current impact assessment and a chapter detailing how collision risk for birds and bats may be monitored at sea The mitigation section comprises chapters outlining mitigation options and strategies for birds and bats and how to mitigate the effects of noise especially during construction on marine mammals and fish A chapter on perspectives on marine spatial planning as applied to wind farms concludes the volume The authors have been carefully selected from across the globe from the large number of academics consultants and practitioners

now engaged in wind farm studies for their influential contribution to the science Edited by Martin Perrow and with contributions by over 40 leading researchers including Aonghais Cook Thomas Dahlgren Johann Koppel Meike Scheidat Henrik Skov Chris Thaxter as well as several leading consultancies Each chapter includes informative figures tables photographs and detailed case studies Several of the latter are produced stand alone from invited specialists to ensure geographic spread and to showcase exciting new research This book is designed as the definitive guide on the topic for practitioners researchers managers and planners as well as students in higher education engaged in studies of the environment ecology climate change conservation and impact assessment Other volumes Volume 1 Onshore Potential Effects 978 1 78427 119 0 Volume 2 Onshore Monitoring and Mitigation 978 1 78427 123 7 Volume 3 Offshore Potential Effects 978 1 78427 127 5
