Progress in Location Based Services 2018 Peter Kiefer, Haosheng Huang, Nico Van de Weghe, Martin Raubal, 2017-12-07 This book gathers a selection of the best papers presented during the 14th International Conference on Location Based Services which was held in Zurich Switzerland between the 15th and 17th January 2018. It presents a general overview of recent research activities related to location based services. Such activities have grown in importance over the past several years especially those concerning outdoor indoor positioning smart environments spatial modeling personalization and context awareness cartographic communication novel user interfaces crowdsourcing social media big data analysis usability and privacy [OpenLayers 2.10 Beginner's Guide](#) Erik Hazzard, 2011-03-18 Create optimize and deploy stunning cross browser web maps with the OpenLayers JavaScript web mapping library [Digital in Underwater Cultural Heritage](#) Guzden Varinlioglu, 2016-04-26 One can argue that academia has always existed in an information age however as the general public gains access to ever more advanced systems it can be claimed that areas of academia require updating to maintain vitality in today's world. When nautical archaeology produces inspiring reports they are often at the hand of large budgets rather than general day to day dissemination. This book proposes using state of the art low budget digital technology from the outset of surveys so that data may be recorded analysed and disseminated with seamless efficiency and great flair while employing progressively less decontextualized means. Further it conveys a simple methodology that allows for data collection by teams of volunteer divers. Big data rapid analysis and cross reference requirements have created a shift towards the need for advanced digital means particularly relating to underwater archaeology where survey time is limited. This book logs several years of studies which respect in situ preservation where the limits of technology were stretched to the cutting edge using novel collection methods to populate custom built numerical and visual databases generating 2D and 3D digital models and further creating a Virtual Reality museum. These advances not only propel the function of academia but also promote the image of archaeology in an age where visualisation matters.
