Protein-Coupled Receptors - Modeling and Simulation Marta Filizola, 2013-10-25 G protein coupled receptors GPCRs are heptahelical transmembrane receptors that convert extra cellular stimuli into intra cellular signaling and ultimately into biological responses Since GPCRs are natural targets for approximately 40% of all modern medicines it is not surprising that they have been the subject of intense research Notwithstanding the amount of data generated over the years discovering ligands of these receptors with optimal therapeutic properties is not straightforward and has certainly been hampered for years by the lack of high resolution structural information about these receptors Luckily there has been a steady increase of high resolution crystal structures of these receptors since 2007 and this information integrated with dynamic inferences from computational and experimental methods holds great potential for the discovery of new improved drugs This book which provides for the first time state of the art views on modeling and simulation of GPCRs is divided into 4 parts In the first part the impact of currently available GPCR crystal structures on structural modeling is discussed extensively as are critical insights from simulations in the second part of the book The third part reports recent progress in rational ligand discovery and mathematical modeling whereas the fourth part provides an overview of bioinformatics tools and resources that are available for GPCRs **Asian Oil & Gas**, 2007 **Transactions** Gulf Coast Association of Geological Societies, 1953

Geothermal Power Generation Ronald DiPippo, Luis Carlos Gutiérrez-Negrín, Andrew Chiasson, 2024-10-11 Geothermal Power Generation New Developments and Innovations Second Edition provides an update to the advanced energy technologies that are urgently required to meet the challenges of economic development climate change mitigation and energy security Edited by respected and leading experts in the field this book provides a comprehensive overview of the major aspects of geothermal power production Chapters cover resource discovery resource characterization energy conversion systems design economic considerations and a range of fascinating and updated case studies from across the world Geothermal resources are considered renewable and are currently the only renewable source able to generate baseload electricity while producing very low levels of greenhouse gas emissions thus playing a key role in future energy needs Provides readers with a comprehensive and systematic overview of geothermal power generation Presents an update to advanced energy technologies that are urgently required to meet the challenges of economic development climate change mitigation and energy security Edited by authorities in the field and contributed to by global experts in their areas Supports sustainability and the United Nations Sustainable Development Goals UN SDGs 7 9 11 and 13 Fundamental Controls on Fluid Flow in Carbonates S.M. Agar, S. Geiger, 2015-02-02 This volume highlights key challenges for fluid flow prediction in carbonate reservoirs the approaches currently employed to address these challenges and developments in fundamental science and technology The papers span methods and case studies that highlight workflows and emerging technologies in the

fields of geology geophysics petrophysics reservoir modelling and computer science Topics include detailed pore scale studies that explore fundamental processes and applications of imaging and flow modelling at the pore scale case studies of diagenetic processes with complementary perspectives from reactive transport modelling novel methods for rock typing petrophysical studies that investigate the impact of diagenesis and fault rock properties on acoustic signatures mechanical modelling and seismic imaging of faults in carbonate rocks modelling geological influences on seismic anisotropy novel approaches to geological modelling methods to represent key geological details in reservoir simulations and advances in computer visualization analytics and interactions for geoscience and engineering

Building Python Real-Time

Applications with Storm Kartik Bhatnagar, Barry Hart, 2015-12-02 Learn to process massive real time data streams using Storm and Python no Java required About This Book Learn to use Apache Storm and the Python Petrel library to build distributed applications that process large streams of data Explore sample applications in real time and analyze them in the popular NoSQL databases MongoDB and Redis Discover how to apply software development best practices to improve performance productivity and quality in your Storm projects Who This Book Is For This book is intended for Python developers who want to benefit from Storm's real time data processing capabilities If you are new to Python you'll benefit from the attention to key supporting tools and techniques such as automated testing virtual environments and logging If you're an experienced Python developer you'll appreciate the thorough and detailed examples What You Will Learn Install Storm and learn about the prerequisites Get to know the components of a Storm topology and how to control the flow of data between them Ingest Twitter data directly into Storm Use Storm with MongoDB and Redis Build topologies and run them in Storm Use an interactive graphical debugger to debug your topology as it's running in Storm Test your topology components outside of Storm Configure your topology using YAML In Detail Big data is a trending concept that everyone wants to learn about With its ability to process all kinds of data in real time Storm is an important addition to your big data bag of tricks At the same time Python is one of the fastest growing programming languages today It has become a top choice for both data science and everyday application development Together Storm and Python enable you to build and deploy real time big data applications quickly and easily You will begin with some basic command tutorials to set up storm and learn about its configurations in detail You will then go through the requirement scenarios to create a Storm cluster Next you'll be provided with an overview of Petrel followed by an example of Twitter topology and persistence using Redis and MongoDB Finally you will build a production quality Storm topology using development best practices Style and approach This book takes an easy to follow and a practical approach to help you understand all the concepts related to Storm and Python

Hydrocarbon

Processing , 2007 September 1 2021 Since 1922 management and technical professionals from petroleum refining gas processing petrochemical chemical and engineer constructor companies throughout the world have turned to Hydrocarbon Processing for high quality technical and operating information Through its monthly magazine website and e newsletters

Hydrocarbon Processing covers technological advances processes and optimization developments from throughout the global Hydrocarbon Processing Industry HPI Hydrocarbon Processing editors and writers provide real world case studies and practical information that readers can use to improve their companies operations and their own professional job skills taken from publisher web site *Quantifying Uncertainty in Subsurface Systems* Céline Scheidt,Lewis Li,Jef Caers,2018-04-27

Under the Earth's surface is a rich array of geological resources many with potential use to humankind. However extracting and harnessing them comes with enormous uncertainties, high costs and considerable risks. The valuation of subsurface resources involves assessing discordant factors to produce a decision model that is functional and sustainable. This volume provides real world examples relating to oilfields, geothermal systems, contaminated sites and aquifer recharge. Volume highlights include: A multi disciplinary treatment of uncertainty quantification. Case studies with actual data that will appeal to methodology developers. A Bayesian evidential learning framework that reduces computation and modeling time. *Quantifying Uncertainty in Subsurface Systems* is a multidisciplinary volume that brings together five major fields: information science, decision science, geosciences, data science and computer science. It will appeal to both students and practitioners and be a valuable resource for geoscientists, engineers and applied mathematicians. [Practical Solutions to Integrated Oil and Gas Reservoir Analysis](#) Enwenode Onajite,2017-05-19 *Practical Solutions to Integrated Oil and Gas Reservoir Analysis*

Geophysical and Geological Perspectives is a well timed source of information addressing the growing integration of geophysical, geological, reservoir engineering, production and petrophysical data in predicting and determining reservoir properties. These include reservoir extent and sand development away from the well bore, characterizations of undrilled prospects and optimization planning for field development. As such geoscientists must now learn the technology, processes and challenges involved within their specific functions in order to complete day to day activities. A broad collection of real life problems and challenging questions encountered by geoscientists in the exploration and development of oil and gas fields, the book treats subjects ranging from Basin Analysis to identifying and mapping structures, stratigraphy, the distribution of fracture and the identification of pore fluids. Looking at the well to seismic tie, time to depth conversion, AVO analysis, seismic inversion, rock physics and pore pressure analysis prediction, the text examines challenges encountered in these technical areas and also includes solutions and techniques used to overcome those challenges. Presents a thorough understanding of the contributions and issues faced by the various disciplines that contribute towards characterizing a wide spectrum of reservoirs. Conventional Shale Oil and Gas as well as Carbonate reservoirs. Provides a much needed and integrated approach amongst disciplines including geology, geophysics, petrophysics, reservoir and drilling engineering. Includes case studies on different reservoir settings from around the world including Western Canadian Sedimentary Basin, Gulf of Guinea, Gulf of Mexico, Milne Point field in Alaska, North Sea, San Jorge Basin and Bossier and Haynesville Shales and others to help illustrate

key points *Hart's E&P. ,2009 Scientific Workflows* Jun Qin,Thomas Fahringer,2012-08-15 Creating scientific workflow applications is a very challenging task due to the complexity of the distributed computing environments involved the complex control and data flow requirements of scientific applications and the lack of high level languages and tools support Particularly sophisticated expertise in distributed computing is commonly required to determine the software entities to perform computations of workflow tasks the computers on which workflow tasks are to be executed the actual execution order of workflow tasks and the data transfer between them Qin and Fahringer present a novel workflow language called Abstract Workflow Description Language AWDL and the corresponding standards based knowledge enabled tool support which simplifies the development of scientific workflow applications AWDL is an XML based language for describing scientific workflow applications at a high level of abstraction It is designed in a way that allows users to concentrate on specifying such workflow applications without dealing with either the complexity of distributed computing environments or any specific implementation technology This research monograph is organized into five parts overview programming optimization synthesis and conclusion and is complemented by an appendix and an extensive reference list The topics covered in this book will be of interest to both computer science researchers e g in distributed programming grid computing or large scale scientific applications and domain scientists who need to apply workflow technologies in their work as well as engineers who want to develop distributed and high throughput workflow applications languages and tools **Workflow Modeling** Patrick McDermott,2001
