 aim to discover the central aspects of India s heritage and present them in an interrelated manner In spite of their unitary  
 look these volumes recognize the difference between the areas of material civilization and those of ideational culture The  
 Project is not being executed by a single group of thinkers methodologically uniform or ideologically identical in their  
 commitments Rather contributions are made by different scholars of diverse ideological persuasions and methodological  
 approaches The Project is marked by what may be called methodological pluralism In spite of its primarily historical  
 character this project both in its conceptualization and execution has been shaped by scholars drawn from different  
 disciplines It is the first time that an endeavour of such unique and comprehensive character has been undertaken to study  
 critically a major world civilization This Volume endeavours to present the perceptible facets of the tradition of astronomy in  
 India the torch bearers of this tradition and their texts main characteristics of Indian astronomy scientific approach to the  
 phenomenon of eclipse pancanga and its social dimensions including the vrata s festivals and other observances origin of  
 astrological ideas their seeming links with astronomy and certain contradictions extensive computations concerning  
 planetary revolutions in a huge cyclic period mean as well as true positions of planets and associated mathematical aspects  
 In order to have the narrative undisturbed the related mathematical astronomy has been given in the Appendices  
 Computations apart Indian astronomers were keen observers of the motions of celestial bodies and used several instruments  
 and this aspect has been dealt with appropriately The question of transmissions in the early centuries before and after the  
 Christian Era vis a vis the originality and endogenous developments of Indian astronomy has been addressed in an objective  
 manner Since Islamic astronomy has also fostered its tradition in India for over 500 years three articles on this have been  
 reproduced in the Appendices Indian astronomical texts are noted for their mathematical astronomical scientific terminology  
 which was so standardized that it enabled astronomers who were separated both in time and space to articulate and promote  
 this tradition over the centuries as evidenced by the extensive glossary of technical terms given at the end It is hoped that  
 this Volume probably the first of its kind inasmuch as it sheds light on both the scientific and the long tradition of Indian  
 astronomy will be found useful by scholars and general readers alike      *Reports of the Archaeological Survey of India* ,1892
