- Strings
- Objects
- Enums
- Subroutines
- Functions

INTRODUCTION TO JAVA

A PROGRAM is a set of instructions a computer can execute to perform a task.

SYNTAX are rules that specify the basic vocabulary of a programming language, and states what can and cannot be used.

SEMANTICS refer to the meaning of a program. It's the way that the code behaves and the rules that govern how it operates.

COMMENTS are ignored by the computer. They are for human readers only. To make a large comment, use `/*`. To make many comments across multiple lines, use `/**` (starts with and ends with `*/`).

Command `System.out.println("Hello World");`

System.out is a class that contains a static method named `println`.

CLASS

`0001.L1.COM`

```
1 // A program to display the message "Hello World" on the console.
2 public class HelloWorld {
3     public static void main(String[] args) {
4         System.out.println("Hello World");
5     }
6 } // End of class HelloWorld
```

ENUM

An enum is a data type that can be created by a programmer to represent a small collection of possible values. An enum can be considered a class and its possible values are objects. Enums can be used to add a new type to the Java language.

SUBROUTINES

In Java, every subroutine is contained in a class or in an object. Some classes that are standard parts of the Java language contain predefined subroutines that you can use. Strings contains subroutines that can be used to manipulate that string. Strings are also known as **objects**. These subroutines are "built into" the Java language. A subroutine is a "black box" which can be used without knowing what goes on inside.

CLASSES

Classes in Java have (a) different functions.

1. A class can group together variables and subroutines contained in that class. This group is called **static members** of the class.
`0001.L1 public static void main(String[] args) {`
2. Classes are used to describe objects. Meaning, the class of an object specifies what subroutines and variables are contained in that object.

SUBROUTINE EXAMPLE OF `System.out.println`

This subroutine is used to display information to the user.

```
System.out.println("Hello World"); // Prints the message "Hello World"
```

`System` is one of Java's standard classes.

`out` is one of the static member variables in this class.

The variable `System.out` refers to an object, and that object in turn contains a subroutine called `println`.

`"System.out.println"` is a compound identifier in Java that refers to the `println` method/subroutine within the `out` object of the `System` class.

Objects First With Java Study Guide:

Complete Java 2 Certification Study Guide Philip Heller, Simon Roberts, 2006-02-20 Here's the book you need to prepare for the Java 2 Programmer SCJP and Developer SCJD exams. This Study Guide was developed to meet the exacting requirements of today's certification candidates. In addition to the consistent and accessible instructional approach that has earned Sybex the reputation as the leading publisher for certification self-study guides, this book provides in-depth coverage of every exam objective for the revised SCJP Exam. Hundreds of challenging practice questions. Leading edge exam preparation software including a test engine and the entire book on PDF. Authoritative instruction on all revised Programmer exam objectives including Declarations, initialization and scoping, Flow control, API contents, Concurrency, Object oriented concepts, Collections and generics, Language fundamentals. Detailed discussion of the key topics included in the Developer exam including Swing components and events, Layout managers, Enhancing and extending the database, Writing the network protocol, Building the database server, Connecting the client and server.

Objects First with Java David J. Barnes, Michael Kolling, Michael Kölling, 2003 0 13 044929 6 4492J 5 Barnes Kolling OBJECTS FIRST WITH JAVA BlueJ is a Java development environment that runs on top of the Sun Microsystems Java Development Kit, making use of the standard compiler and virtual machine. It allows readers to create objects of any class and interact with their methods. For the first time, the traditionally difficult concepts of objects and classes are brought alive in an easily manipulable visual form. This truly objects first approach within the customized BlueJ environment will revolutionize the way programming is learned. The book includes a copy of BlueJ. Takes a project driven approach to problem solving; the book is structured along the lines of fundamental development tasks, providing readers with clear coverage of the principles of object oriented programming. Programmers and non-programmers who want to learn Java with a state of the art approach and user friendly programming environment.

Java: The Fundamentals of Objects and Classes, Valuepack: *Objects First with Java* Anthony Croft, David Barnes, 2005-08-01 Objects First with Java David John Barnes, David J. Barnes, Michael Kölling, 2005 This introductory programming textbook integrates BlueJ with Java. It provides a thorough treatment of object oriented principles.

Comprehensive object-oriented learning Annita Fjuk, Amela Karahasanović, Jens Kaasbøll, 2006 There is a high demand for understanding the learner's actions, strategies and thoughts while solving object oriented problems. The book provides new insight into knowledge acquiring processes and shows how to successfully integrate the empirically based findings into pedagogical design. Objects First with Java: A Practical Introduction Using BlueJ, Global Edition David Barnes, Michael Kölling, 2025-07-02

Computational Thinking in the STEM Disciplines Myint Swe Khine, 2018-08-14 This book covers studies of computational thinking related to linking, infusing and embedding computational thinking elements to school curricula, teacher education and STEM related subjects. Presenting the distinguished and exemplary works by educators and researchers in the field, highlighting the contemporary trends and issues, creative and unique approaches, innovative methods.

frameworks pedagogies and theoretical and practical aspects in computational thinking A decade ago the notion of computational thinking was introduced by Jeannette Wing and envisioned that computational thinking will be a fundamental skill that complements to reading writing and arithmetic for everyone and represents a universally applicable attitude The computational thinking is considered a thought processes involved in a way of solving problems designing systems and understanding human behaviour Assimilating computational thinking at young age will assist them to enhance problem solving skills improve logical reasoning and advance analytical ability key attributes to succeed in the 21st century Educators around the world are investing their relentless effort in equipping the young generation with real world skills ready for the demand and challenges of the future It is commonly believed that computational thinking will play a pivotal and dominant role in this endeavour Wide ranging research on and application of computational thinking in education have been emerged in the last ten years This book will document attempts to conduct systematic prodigious and multidisciplinary research in computational thinking and present their findings and accomplishments
