The Influence of Flourishing and its Associated Factors on the Mental Health and Well-Being of Individuals Giancarlo Lucchetti,Juliane Piasseschi de Bernardin Gonçalves,Homero Vallada,Rocío De Diego-Cordero ,Bárbara Badanta,2025-12-04

The mental health burden is increasing posing challenges to healthcare systems worldwide Aiming to reduce this burden new models of care are using some concepts of the positive psychology to generate observational evidence and to propose interventions such as the case of values virtues and flourishing Flourishing is defined by VanderWeele as the relative attainment of a state in which all aspects of a person s life are good including the contexts in which that person lives which includes domains of human life such as i happiness and life satisfaction ii health both mental and physical iii meaning and purpose iv character and virtue and v close social relationships and four pathways i e family work education and religious community These domains have been increasingly studied over the past decades and are based on a less disease oriented and a more person centred view of healthcare Although there is a consolidated literature investigating the factors associated with mental health and well being among different populations more evidence is needed concerning the role of values virtues and flourishing This research topic aims to understand further the role of flourishing or its associated factors on the well being and mental health of different populations bringing new insights and novel approaches to address the mental health of individuals For this topic we are considering the following associated factors of flourishing forgiveness meaning purpose character virtues kindness altruism volunteering spirituality religiosity transcendence gratitude savoring compassion resilience family and flourishing as a general term preferred To achieve this goal we are seeking high quality studies that could bring novel findings generate robust data propose new interventions and explore the mechanisms of actions for the relationship between different domains of flourishing and mental health This Research Topic will include the following topics Understanding the definitions and concepts of flourishing based on systematic or scoping reviews of the literature Systematic reviews with meta analysis concerning the association between flourishing or its associated factors on the mental health and or well being of individuals Observational preferred longitudinal studies assessing how flourishing or its associated factors may have an influence on the mental health and well being among different populations Studies experimental or quasi experimental proposing and investigating the effectiveness of different flourishing interventions or its associated factors on the mental health and well being of individuals Studies addressing the mechanisms by which flourishing or its associated factors may lead to mental health and well being outcomes Studies that use instruments scales of flourishing Qualitative studies following COREQ or SRQR checklists aiming to understand flourishing and its relationship with mental health

Rafferty, Neville A. Stanton, 2017-11-01 Fratricide has been defined as firing on your own forces when mistaking them for enemy forces which results in injury or death Rates of fratricide incidence have been steadily increasing and the complexity of the contemporary operating environment may lead to a continuation of this trend Although the majority of research into fratricide has focused on the development of technological decision aids recent explorations highlight the need to emphasise the social aspects within a socio technical framework This book presents and validates via the use of case studies a model of teamwork and decision making factors that are associated with incidents of fratricide In summary it offers a review and evaluation of contemporary theoretical perspectives on teamwork and fratricide as well as a range of accident analysis approaches A novel theory of fratricide is then presented followed by a new methodology for assessing fratricide Naturalistic case studies of teams are undertaken in the military domain These studies illustrate the approach and offer early validation evidence In closing the book presents a series of principles designed to reduce the likelihood of fratricide in the future
