Programming Languages and Systems APLAS 2018 held in Wellington New Zealand in December 2018 The 22 papers presented in this volume were carefully reviewed and selected from 51 submissions They are organized in topical sections named types program analysis tools functional programs and probabilistic programs verification logic and continuation and model checking   Understanding Object-oriented Programming with Java Timothy Budd,2006   Fundamentals of Object-Oriented Programming in Java Permanand Mohan,2013-02-28 This book aims to present the concepts and techniques of object oriented programming as simply as possible so that it can be easily understood and mastered by beginners The emphasis is on presenting concepts at the right time and with the right amount of detail to encourage learning and mastery of the material The book does not focus on the Java programming language rather Java is used as a vehicle to implement the object oriented concepts presented in the book To help readers become familiar with the Java programming language the book starts off by describing the basic features of the language These include data types and variables arrays control structures if while for etc and performing input and output Several exercises have been carefully designed so that readers can get up to speed with Java as quickly as possible The book strikes a good balance between theory and practice Some object oriented concepts often require lengthy explanations for beginners to fully understand the concepts Based on years of experience in teaching object oriented programming the book condenses long explanations in favour of providing real examples which show how the concepts are implemented in an object oriented program Thus detailed code examples are liberally interspersed with theoretical descriptions throughout the book One of the unique features of the book is that it contains five chapters called Programming Projects which explain how to build a complete object oriented program based on the material presented in the other chapters These chapters appear when all the relevant material required for writing the program has been thoroughly discussed in the preceding chapters Each of the five chapters starts by describing the problem in narrative form The chapter then gives a detailed definition of the functionality required Next the chapter explains how the functionality can be implemented using the object oriented concepts presented earlier in the book The chapter ends with a complete working Java program that solves the problem described Often alternative solutions are presented so that readers will be aware that there are competing ways to implement an object oriented program with different trade offs Another unique feature of the book is that that new material is not used or referenced before it has been discussed The book is essentially incremental in nature so that new concepts being introduced always build on earlier concepts Thus readers are only exposed to new concepts or language features when pre requisite material has been completely discussed Also great care has been taken to avoid the use of programming language features which though very useful for advanced programmers can make it harder for a beginner to focus on and learn the object oriented principles being imparted This book is based on the experience gained from many years of teaching object oriented programming to beginners who know another programming language It is likely to benefit readers who are looking for a good practical introduction to object oriented
