Pearson Math Make Sense Grade 9:

Teaching Mathematics in Grades 6 - 12 Randall E. Groth, 2012-08-10 A journey into the vibrant and intriguing world of mathematics education. *Teaching Mathematics in Grades 6-12* explores how research in mathematics education can inform teaching practice in grades 6-12. The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students' mathematical thinking and then connecting this research to practices that enhance students' understanding of the material. The chapters in Part I introduce secondary teachers to the field of mathematics education with cross cutting issues that apply to teaching and learning in all mathematics content areas. The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts. The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6-12 classrooms and how students' thinking may develop in response to different teaching strategies.

Believing that teachers who are comfortable with mathematics develop learners who are comfortable with mathematics this author empowers preservice preK-4 teachers to teach math confidently by laying a solid foundation of math concepts and building on that foundation with engaging meaningful standards based teaching methods. Integrated in this unique combined approach to teaching mathematics is a thorough discussion of math manipulatives as well as the use of technology/computer and other wise to assist today's mathematics teacher. For educators, aids and parents responsible for teaching Pre K to fourth grade math.

Disciplinary and Interdisciplinary Education in STEM Yeping Li, Zheng Zeng, Naiqing Song, 2024-03-19 This book provides an international platform for educators from different STEM disciplines to present, discuss, connect and develop collaborations in two inter related ways: 1) sharing and discussing changes and innovations in individual discipline based education in STEM/STEAM and 2) sharing and discussing the development of interdisciplinary STEM/STEAM education. Possible relationships and connections between individual disciplines like mathematics or physics and STEM education remain under explored and the integration of traditionally individual discipline based education in STEM education is far from balanced. Efforts to pursue possible connections among traditionally separated individual disciplines in STEM are not only necessary for the importance of deepening and expanding interdisciplinary research and education in STEM but also for the ever increasing need of reflecting on and changing how traditional school subjects like mathematics or physics can and should be viewed, taught and learned. Scholars from eight countries/regions provide diverse perspectives and approaches on changes and innovations in STEM disciplinary and interdisciplinary education. Disciplinary
