Kaliakin, 1996 The effects of time on the strength and deformation characteristics of various materials can assume importance in a variety of engineering problems The time dependent mechanical behavior of soil is highly complex and can impact a broad range of applications such as in situ testing seismic response landslides and embankment performance This volume provides an update on the state of research and practice in the area of soil time effects Emphasis is placed on laboratory and field developments modeling time dependent behavior rate dependence in a variety of soils from subtropical soils to subglacial till and on new applications such as soils reinforced with geosynthetics and inclusion dowels Models are provided that include the influence of soil structure      **Testing the Theory of Reasoned Action and Its Extensions** Edward E. Marandu, 2008-12-31 This study investigates using the Theory of Reasoned Action and its extensions factors that determine intention to use condoms among tertiary institution students in Botswana The data used was obtained from a questionnaire survey of 785 students The findings partially support existing theory for the three explanatory factors of intention were significant without controlling for the effect of each other However contrary to empirical findings in advanced countries subjective norm societal factor played a larger role in explaining intention than attitude although the evidence is mixed These findings suggest that in Western cultures where individualist freedom is emphasised behavioural intention would generally be determined not only by personal attitudes but more so by the attitudes of others Further the relatively undeveloped economic environment might impose behavioural constraints In several African countries these broader social environmental issues pose critical and sometimes binding influence on the behaviour of many individuals It follows that a study of behavioural intentions in the African scene which places greater emphasis on measuring attitudinal factors may be misleading because of under specification of the causal social environmental perceived societal and perceived control factors
